LIST OF ILLUSTRATIONS

Figure No.

Figure-1 Mean ELISA O.D. values of IgG and IgM for toxocara grouping.

Figure-2 Standard curve for the determination of molecular weight of ES antigen.

Figure-3 SDS-PAGE patterns of T. canis larval ES antigen with marker proteins.

Figure-4 Sephadex G-25 column chromatography of ES antigen.

Figure-5 SDS-PAGE patterns of sephadex G-25 fractionated ES antigen with different marker proteins.

Figure-6 Fractionation of human serum immunoglobulin IgG by DEAE-cellulose column chromatography.

Figure-7 PAGE-pattern of the pooled human serum IgG.

Figure-8 Competitive binding studies by inhibition ELISA.

Figure-9 Molecular weights of different immunocomplexes.

Figure-10 Ouchterlony gel diffusion of ES antigen with suspected subjects' sera.

Figure-11 Ouchterlony gel diffusion of ES antigen with suspected ocular toxocariasis.

Figure-12 Ouchterlony gel diffusion of vitreous humor and sera of two ocular toxocara subjects.

Figure-13 Simple gel diffusion of sephadex G-25 fractionated larval ES antigen (Mol. Wt. 42 Kd) with rabbit antisera.
Figure-14  Counter immunoelectrophoresis of the sephadex G-25 fractionated (Mol. Wt. 42 Kd) antigen with that of the human positive toxocara cases.

Figure-15  The specificity of the 42 Kd larval antigen with different dilution of human positive serum.

Figure-16  Zone electrophoresis of suspected toxocara subjects' sera, which are positive for C-reactive proteins.

Figure-17  Ouchterlony gel diffusion of ES antigen with sera of suspected subjects for toxocariosis and C-reactive protein.

Figure-18  Ouchterlony gel diffusion of ES antigen with anti-sera of rabbits.

Figure-19  Simple gel diffusion of ES antigen with the sera of two groups of rabbits inoculated with 1000 and 10,000 toxocara eggs.

Figure-20  Ouchterlony gel diffusion of larval ES antigen with anti-sera of rabbits.

Figure-21  Ouchterlony gel diffusion of M-BSA conjugated with ES larval antigen with anti-sera of rabbits.

Figure-22  ELISA with different fractions of larval ES antigen and with anti-sera of rabbit.

Figure-23  Histopathology of human enucleated eye.

Figure-24  Histopathology of human enucleated eye.

Figure-25  Histopathology of rabbit intestine, lung, and liver.
Figure-26  Histopathology of rabbit lung
Figure-27  Histopathology of rabbit liver
Figure-28  Histopathology of rabbit eye
Figure-29  Enzyme-linked immunosorbent assay of rabbits' sera inoculated with 1000 eggs
Figure-30  Enzyme-linked immunosorbent assay of rabbits' sera inoculated with 10,000 eggs
