ACKNOWLEDGEMENTS

It is with deepest sense of gratitude that I record here the guidance received from Prof. Ather H. Siddiqi, Ex-Chairman, Department of Zoology and presently Dean, Faculty of Life Sciences, Aligarh Muslim University, Aligarh in carrying out the work reported in this thesis and for valuable suggestions to improve the manuscript. I am grateful to Prof. Mumtaz A Khan who took over as Chairman of Department of Zoology and helped me in submission of the thesis.

I am also highly indebted to my external guide Dr. M.A. Matin, Assistant Director and Scientist-in-Charge, Pharmacological and Toxicological Studies on Pesticides, Industrial Toxicology Research Centre (ITRC), Lucknow for not only providing laboratory facilities but also helping me in many ways to carry out the investigations and in presentation and interpretation of data. I am also thankful to Dr. P.K. Ray, Director, ITRC for permitting me to pursue higher studies.

I also wish to record my appreciation to Shri S.N. Agarwal, Library Officer, ITRC, who helped me in very many ways in collecting the literature and compilation of bibliography. The photomicrographs were made by Shri Musleh Ahmed of ITRC to whom I wish
to give my compliments. Technical help received from Shri Khalil Ahmed is also gratefully acknowledged.
Thanks are also due to Shri A.S.P. Sarma of the Ministry of Environment and Forests, New Delhi for typing the manuscript.

Lastly, I am grateful to my wife Nuzhat whose appreciation and encouragement enabled me to complete the laboratory and desk work and to bring the thesis in its present form within the time schedule. But for the unstinted support received from her, completion of this thesis would have been impossible.

(Riazur Rehman Khan)
