Bibliography

There is an immense volume of literature on strategic aspects of international relations, but, at the same time, because of the extremely dynamic nature of political-strategic developments and scientific-technological innovations, much of it also becomes rapidly out of date. There is a need to be selective and to regularly monitor the journals and research monographs relevant to current technical and strategic developments. At the same time, there are some works which have not lost their relevance inspite of the passage of time and they deal with questions that have remained important for the inter-state relations in all the ages. The works that have been mentioned in this bibliography are of this category. Though some are earlier publications, they have not lost their relevance and analyze the problems discussed in these pages in a contemporary context. This bibliography does not pretend to be comprehensive or exhaustive. But it covers those works, both recent and earlier (though very much relevant) that explain and analyze the problems discussed here, and which have made original contribution to the development of our knowledge in this discipline. It deals with the most worthwhile books of this discipline.

produced by the UCLA, *Reports* of the RAND Corporation at Santa Monica USA, *monographs* of the Arms Control and Disarmament Agency, and the *Canberra Papers on Strategy and Defence*, produced by the ANU Canberra, Australia, and *Jane's Defence Weekly*. Then, there are extremely useful annual reference works: *The Military Balance* and *The Strategic Survey* produced by the ISSS, London; the *SIPRI Yearbook on Armament and Disarmament* produced by the Stockholm International Peace Research Institute, and, from India, the seven regional issues published each month as the *IDSA News Review*.
