Figure	Page
3.1	28
3.2	29
3.3	30
3.4	31
3.5	32
4.1.1.1	41
4.1.1.2	42
4.1.2.1	49
4.1.2.2	50
4.2.1.1	65
4.2.1.2	66
4.2.1.3	67
4.2.1.4	68
4.2.2.1	77

Figure	Page
	design (level 1,2,3,4 refers to 4,10,16,22 degrees while 1` ,2` ,3` ,4` refers to 15,20,25,30 degrees) (Study-4).
4.2.2.2	Human muscular fatigue under “conventional” and “split-shaped” keyboards design at different levels (tilt/base angles) of keyboard inclination (level 1 to 4 and 1` to 4` same as in Figure 4.2.2.1) (Study-4). 78
4.2.2.3	Human muscular fatigue for different age-groups of operators under different inclination levels of the keyboard design (level 1 to 4 same as in Figure 4.2.2.1) (Study-4). 79
4.2.2.4	Human muscular fatigue under different keyboard inclination levels for different age-groups of operators (level 1 to 4 same as in Figure 4.2.2.1) (Study-4). 80
4.3.1.1	Muscular fatigue as a function of keyboard inclination levels for “conventional” (1 to 4) and “Unishaped” (1` to 4`) keyboards design (levels 1,2,3,4 refer to 4,10,16,22 degrees while 1` ,2` ,3` ,4` refers to 15,20,25,30 degrees) (Study-5). 93
4.3.1.2	Human muscular fatigue induced in operators when they worked on “conventional” and “unishaped” keyboards design at different inclination (tilt/base angle) levels of the keyboard (level 1 to 4 and 1` to 4` as in Figure 4.3.1.1) (Study-5). 94
4.3.1.3	Muscular fatigue as a function of keyboard inclination (tilt angle) levels for right and left-handed operators when they performed data entry task on conventional keyboard design (level 1 to 4 same as in Figure 4.3.1.1) (Study-5). 95
4.3.1.4	Muscular fatigue of right and left-handed operators under different inclination (tilt angle) levels of conventional keyboard (level 1 to 4 same as in Figure 4.3.1.1) (Study-5). 96
4.3.2.1	Human muscular fatigue as a function of keyboard inclination levels for “Conventional” (1 to 4) and “Split-Shaped” (1` to 4`) keyboards design (levels 1,2,3,4, refer to 4,10,16,22 degrees while 1` ,2` ,3` ,4` refers to 15, 20, 25, 30 degrees) (study-6). 103
4.3.2.2	Human muscular fatigue under conventional” and “split-shaped” keyboards induced in operators of different inclination (tilt/base angles) of keyboard designs (level 1 to 4 and 1` to 4` same as in Figure 4.3.2.1) (study-6). 104
4.3.2.3	Muscular fatigue as a function of keyboard inclination (tilt angle) levels for the respective population of right- and left-motor-sided peoples (level 1 to 4 same as in Figure 4.3.2.1) (study-6). 105
4.3.2.4	Muscular fatigue induced in operators with specific human motor sidedness under different keyboard inclination (tilt angle) levels (level 1 to 4 same as in Figure 4.3.2.1) (study-6). 106
