

LIST OF APPENDICES

Appendix	Page	
A	Annet's inventory on motor-sidedness	143
B	Experimental task	144
C	Schematic diagram of the unishaped and split-shaped keyboards	145
D	Schematic diagram of the tilt and base angles of the conventional and modishaped types of keyboard designs respectively	146
E	Analogue to digital converter and integrator circuit diagrams employed in instrumentation system.	147
F	Instruction sheet	148
G	Individual and mean muscular fatigue values and standard deviations (in IEMG-units) for males and female operators when performing the data entry task with conventional and uni-shaped types of keyboard designs under different inclination levels of the keyboards.	149
H	Individual and mean muscular fatigue values and standard deviations (in IEMG-units) for the subjects when performing the data entry task under two inclination levels of the tilt angle of unishaped keyboard.	150
I	Individual and mean muscular fatigue values and standard deviations (in IEMG-units) for males and females when performing the data entry task with conventional and split-shaped keyboards under different inclination levels of keyboards design.	151
J	Individual and mean muscular fatigue values and standard deviations (In IEMG-units) for the four age- groups of operators when performing the data entry task on conventional and unishaped type of keyboards inclined at different angles.	152
K	Individual and mean muscular fatigue values and standard deviations (in IEMG-units) for the four age- group of operators when performing the data entry task on conventional and split-shaped types of keyboards at different levels of inclination.	153
L	Individual and mean muscular fatigue values and standard deviations (in IEMG-units) for right- and left- motor sided operators when performing the data entry task on conventional and unishaped types of keyboards at different levels of the inclination.	154
M	Individual and mean muscular fatigue values and standard deviations (in IEMG-units) for right- and left-motor sided operators when performing the data entry task on conventional and split-shaped type of keyboards at different levels of the inclination.	155
