TABLE OF CONTENTS

PREFACE ................................................................. (v)

ABBREVIATION ......................................................... (xi)

CHAPTER I : Preliminaries ........................................... 1

1. Certain algebraic concepts ..................................... 1
2. Circular cones in vector spaces ................................. 6
3. Abstract homogeneous polynomials .............................. 10

CHAPTER II : Cross-ratio theorem on generalized
polar with vanishing weight ........................................ 18

4. A cross-ratio theorem on generalized polars ............... 21
5. An improvement upon Walsh's cross-ratio
    theorem .................................................................. 29
6. Cross-ratio theorem for algebra-valued gene-
    eralized polars ...................................................... 34

CHAPTER III : Some theorem on generalized polars
with a vanishing weight .............................................. 47

7. The main theorem .................................................. 49
8. An application in the complex plane ............................. 53
9. The case of algebra-valued generalized
    polars ................................................................. 57

( iii )
CHAPTER IV: SOME THEOREMS ON GENERALIZED POLARS WITH

ARBITRARY WEIGHT

10. The central theorem

11. Applications in the complex plane

12. The case of algebra-valued generalized polars
