ACKNOWLEDGEMENT

I am indeed fortunate to have Dr. Murtaza A. Quadri as my research supervisor. I immensely owe much to him than I can express in words for his never failing inspiration, stimulating guidance and enlightening advice all along.

My thanks are due to the authorities of the Department of Mathematics, Aligarh Muslim University, Aligarh for providing necessary research facilities during the course of this work. The office assistants and seminar librarians have been courteous and helpful throughout the time. The financial assistance from U.G.C. through Aligarh Muslim University must also be acknowledged.

Obligation and affection can never be repaid, I only wish to record my rare personal attachment and sense of gratitude to my uncle Mr Vakil Ahmad whose moral support and continuous encouragement during the trying moment of doubt, despair and disappointment was solely responsible for the successful completion of this work.

Indeed, I am indebted to many people for suggestions, comments and criticism. The names of Prof. Deniel Zelinsky and Prof. Hisao Tominaga deserve special mention. I would like to gratefully acknowledge the help and the co-operation received from my colleagues and co-workers, foremost among them are M.A. Khan, Siraj A. Ansari, Viqar A. Khan, Ms Rehana Khan and Ms Asma Ali. The friendly advice and critical appraisal of Dr. M. Imdad at various stages were of great value.

Finally, I express my thanks to Mr Murshad Husain Khan for his painstaking job of careful typing the manuscript.

Sept. 29, 1986

(MOHD. ASHRAF)
