ACKNOWLEDGEMENTS

It has been a pride privilege for me to have worked under my reverend teacher Professor S. Izhar Husain who taught me differentiable manifolds at M.Sc., inspired me to do research in this topic and very helpfully supervised my work. I render my indebtedness to him for his inspiring guidance.

I am thankful to Professor Z.U. Ahmad, Chairman, Department of Mathematics, Aligarh Muslim University for providing me all the necessary facilities in the department during the course of this work, and to University Grants Commission for its financial support which I received in the form of Junior as well as senior research fellowship through National Eligibility Test (NET) conducted by them.

I can not express in words what I owe to Dr. S.M. Rizvi for his continuous encouragement and support during the course of my work.

I am deeply indebted to Dr. V.A. Khan whose helpful discussions and constructive suggestions went a long way to give shape to this work.

I also take this opportunity to express my sincere thanks to my colleagues Mr. Khalid Ali Khan and Dr. Shahid
Ali for their help in many ways during the preparation of present thesis.

Lastly I am thankful to Mr Suhail Ahmad for his careful and elegant wordprocessing.

(S.M. Khursheed Haider)
