Chapter – 1  Introduction and Literature Review 11

1.1 Vibrios in aquatic systems and aquaculture 13
1.2 Probiotics in aquaculture 21
1.3 Bacteriophages as therapeutic agents 28
1.3.1 Bacteriophages in aquatic systems and aquaculture 34

Chapter – 2  Isolation, identification and antibiotic sensitivity of Vibrio harveyi from Penaeus monodon larval rearing systems 37

2.1 Introduction 38
2.2 Materials and Methods 40
2.2.1 Bacteria 40
2.2.2 Identification of isolates 41
2.2.2.1 Oxidation/ Fermentation of glucose 41
2.2.2.2 Motility 41
2.2.2.3 Cytochrome oxidase (Kovac’s) 42
2.2.2.4 Catalase 43
2.2.2.5 Sensitivity to vibriostat compound O/129 43
2.2.2.6 Production of Arginine dihydrolase 43
2.2.2.7 Production of Ornithine and Lysine decarboxylase 44
2.2.2.8 Growth at 0% and 8% NaCl 45
2.2.2.9 Voges-Proskauier Reaction 46
2.2.2.10 Citrate utilization 46
2.2.2.11 Production of acid from L-arabinose and D-galactose 46
2.2.2.12 Production of gelatinase, amylase, chitinase and lipase 47
2.2.3 Antibiotic Sensitivity 50
2.2.4 Statistical analysis 51
2.3 Results and Discussion 51

Chapter - 3  Evaluation of probiotic bacteria to inhibit the growth of Vibrio harveyi invitro and improve survival of Penaeus monodon larvae in vivo 60

3.1 Introduction 61
3.2 Materials and Methods 63
3.2.1 Bacteria 63
3.2.2 Antagonism assay 63
3.2.3 Co-culture experiments 64
3.2.4 Effect of the probiotic bacteria to Penaeus monodon post larvae 65
3.2.5 Evaluation of protection accorded by the probiotics to postlarvae of Penaeus monodon from Vibrio harveyi challenge 66
3.3 Results 67
3.3.1 Antagonism assay 67
3.3.2 Coculture experiments 67
3.3.3 Impact of probiotics on larval health and survival 68
3.3.4 Response of probiotic treated post larvae to challenge with Vibrio harveyi 69
3.4 Discussion 70

Chapter - 4 Isolation and characterization of bacteriophages infective to Vibrio harveyi 85

4.1 Introduction 86
4.2 Materials and Methods 87
4.2.1 Bacterial strains and isolation of bacteriophages 87
4.2.2 Determination of phage titres in lysates 88
4.2.3 Purification of phages 88
4.2.4 Stocking of phages 89
4.2.5 Host-range of phages 89
4.2.6 Lytic efficiency of the phages 90
4.2.6.1 In microbiological media (ZoBell’s broth) 90
4.2.6.2 In plain seawater 90
4.2.7 Characterization of phages 91
4.2.7.1 Electron microscopy 91
4.2.7.2 Phage Nucleic acids 91
4.2.7.3 Restriction Fragment Length Polymorphism (RFLP) profile 92
4.2.7.4 Polymerase chain reaction (PCR) 92
4.2.7.5 SDS PAGE 93
4.3 Results and Discussion 93

Chapter - 5 Conclusions and Future Research 112

Appendix 1 Publications from this work 139
Acknowledgements

After a 5-year sojourn in the tea industry following my Masters’ in Life Science, there weren’t many faculties willing to provide an opportunity to pursue my tertiary education. Age seemed to be the decisive factor rather than ability and enthusiasm for research. It was at this juncture that I approached my guide Prof. I.S. Bright Singh seeking an opportunity to carry out research leading to PhD. Like others he too presented the negative factors before me but unlike them he lent an ear to my contentions. I think I must have convinced him lest I wouldn’t be writing this. Over the years I realized that I was fortunate to work with one of the best supervisors a student could ever ask for and one that everyone must try and emulate. I am thankful to him having had the trust in me to work independently and yet was always there to make sure I was on the right track. He was always supportive during failures providing encouragement to look forward to brighter days and always there to make sense of muddled data. The long discussions we have had in these years have greatly influenced the development of my scientific aptitude and the experience I have gained working with him does not limit itself to academics alone. Prof. Singh has been not just a guide, mentor and teacher, but also a great friend not just to me but to all students. I sincerely thank him for everything and for considering me for various fellowships through the externally funded projects he strives to get from time to time during the course of this work.

My PhD registration spanned two academic departments of the Cochin University of Science and Technology, namely, the Faculty of Marine Science where I am registered and School of Environmental Studies which provided the administrative support. I therefore thank the Dean, Faculty of Marine Science, Director, School of Environmental Studies, Dean, Faculty of Environmental Studies, for facilitating the PhD registration and their help and support.

The entire work was carried out at the National Centre for Aquatic Animal Health at Lakeside campus of the University. I have witnessed its growth from a small 5-man team to its present and growing strength of 33 members. The facilities and working environment here were on par with the best to say the least and I am fortunate to have been a part of it and extremely thankful for everything.
Financial support to a student is always valuable and I thank ICAR (Project Code: 0624004), DOD (Project Code: DOD/11/MRDF/4/3/UNI/97 (p-8)), and DBT (Project Code: BT/PR 4012/AAQ/03/204/2003), Govt. of India, for providing fellowship and project support from time to time. A part of this work was funded by MPEDA (Project Code: AQ/HO/R.P/4-1/2000-01), Govt. of India for which they are gratefully acknowledged.

I thank the Cochin University of Science and Technology for providing excellent library, high speed internet and in the later part, valuable on-line access to journals and databases.

Dr. A. Mohandas, Emeritus Professor, has been a guiding force throughout this period. Even after retirement he continues to take a keen interest in all academic activities. His criticisms and insights during our discussions did not just limit to academics, were always valuable and will be remembered forever.

Dr. Rosamma Philip, Sr. Lecturer, Department of Marine Biology, Microbiology and Biochemistry, was always there to turn to at all times. She has worked closely in this thesis willingly providing insightful comments and suggestions from time to time. And she has obliged every time whenever I have approached her with numerous requests for various things.

Dr. K.K. Vijayan, Head, Pathology Division, CMFRI is thanked for all the support, advise and collaborations he rendered during the entire work. His visits to the lab were always marked by a lively discussion on varied topics. His comments and opinions have helped immensely in this work.

Dr. K. Sunil Mohammed, Head, Molluscan Fisheries Division, CMFRI, is sincerely thanked for the criticisms, advise and support given during the entire thesis work as the subject expert in the doctoral committee. He took an avid interest and has helped in solving a lot of issues.

A vital part of the work was the in vivo experiments with the probiotics without which the work would have been a real half-baked cake. After facing many failures at various
hatcheries the conduct of the in vivo experiments at the West Coast Hatchery, Andhakaranazhi virtually saved the day. I therefore sincerely extend my heartfelt gratitude to the hatchery management, Mr. Biju and Mr. George for permitting unrestricted use of their hatchery to conduct the experiments. Mr Binil, the hatchery technician worked diligently to ensure the proper management of the larvae in the experimental tanks for which I am deeply indebted. Others in the hatchery who played their role to the extremely well are also gratefully acknowledged.

Dr. Rob Reed, University of Northumbria, is gratefully acknowledged for assisting in all the work from bacteriology to the phages and for accommodating time to discuss the work during his busy schedule whenever he visited the lab, and his prompt replies to mails. Sorry that I was always slow in responding to your mails.

I also thank Dr. T.W. Flegel, Centex Shrimp. Mahidol University, Thailand for all his valuable assistance in the phage work. Many issues could be cleared from his experiences in the area.

I thank Dr. Gopalakrishnan, Scientist NBFGR-Cochin Unit, for being very supportive and helpful during the course this work.

All the teachers in School of Environmental Studies, Dr. Ammini Joseph, Dr. Suguna Yesodharan, Dr. Harindranathan, Dr. S. Rajathy, Dr. S. Achary and Mr. Anand for their concern throughout this period.

The administrative staff of School of Environmental Studies, is wholeheartedly thanked for their support.

I sincerely thank all the people around the world who promptly sent their reprints at my request.

Long hours spent in the lab tend to foster relationships which go far beyond a working one and end up as soul mates rather than mere lab mates. I am fortunate to have teamed up
with some delightful individuals during these years and there never was a boring moment thanks to all of them. Foremost I would like to thank my bosom pal, Anas who was 'always there' for me, on whom I could depend on to take care of things, took actions by just reading my face and pushed me hard at work, and for introducing 'Endnote' which made reference management really easy. He adeptly simplified complicated things for me whenever it was required. I wish you all success in your 'sushi' ventures and hope our 'long term plans' do materialize. Then my dear friend Jayaprakash with whom I could pick on just like that on petty things and never think of making up. Both of our work was closely linked and it was a great pleasure to work in tandem with him and was extremely helpful in many ways to say the least. His exuberance and liveliness were infectious and he always came up interesting 'facts' which more often than not were squarely countered. My cherished buddy Ranjit for pushing me on to finish up, your concerns, our long discussions, 'phage problems', running around for me, rubbing some of your 'health consciousness' on me (was much required) and the times we spent together doing all kinds of things. Preetha, who was also in the DOD project with me always showed a great deal of concern, assisted immensely in the statistical analyses and all other work that we did. Special thanks to Rejish for painstakingly sorting out the 'tree' problems, for being there always and all our other ventures. Priyaja for constantly egging me on, updating on the progress, being the countdown timer and gratefully for assisting in the generic identification work. Busy bee Sreelakshmi for interesting discussions (cannot match your reading prowess) and wholehearted assistance in the generic identification work. Have a good time with the vibrios in the years to come. Gigi's assistance in carrying out the SDS-PAGE and her concern is also gratefully acknowledged. Vrinda for the help on the photographs, running gels, sterilizing things, trying to addict all concerned to 'Lays' and not to forget the soups, noodles and coffee. Seena who could quietly slip into any situation and make a difference in the outcome of the work. Your help in all quarters is gratefully acknowledged. Leju for all the long talks we have had. Dr. Valsamma also was key figure who constantly egged me on, assisted in every possible way and always had an ear to lend. I sincerely thank Shibu for his help and concern throughout this period. Sudheer is thanked for his concerns and earnestness. I also thank all others in the lab, Sreedharan, Manju, Deepesh, Sunish, Haseeb, Rosemary, Surekha, Divya, Charles, Sunitha, Riya, Blessy, Surya, Anish, Biju, Jaison, Savin, Amja, Ranjith for their friendship
and help from time to time. Thanks to Praveen for carrying out all the chemical analyses. Special thanks to our ‘chechi’ for promptly providing clean glassware most of the time at short notices.

My deepest gratitude to the dependable Soman chettan for all the logistical and other support he provided from time to time.

I would like to thank Ranjit, Sunil, Manjusha, Sajeevan and Cini, people who were highly supportive and helpful during the early part of the work and have since moved on in life, but the period spent in your company was memorable to say the least.

To my cherished friends Anup who talked me out of tea and for always being there for me and to his wife Seema I express my heartfelt gratitude. Krishnakumar and Rema for all their support and affection are gratefully acknowledged. Madeline is thankfully acknowledged for her love, support and affection particularly in the last few months and her friends Glaucia and Beatrice too. Much thanks to Sunita and Vijay for all their help. I sincerely acknowledge the concern of my friends Arun, Tekchand, Ansar for their support and concern. Thanks to Saidas for all his help.

All my friends from SES, Rajesh, Subitha, Jitha, Joseph, Balachandran, Suja, Peter are thanked for their support. I thank all my friends in campus from the various departments, Reji Srinivas, Ajay, Baiju, Abhilash, Pramod, Jaleel, Venu, Thampy, Neil, Anil.

I thank all my family, Umesh, Vishwanath, Gopinath, Shanta, Ramesh, Shanteri, Supriya, Ramita, Nandita, Saurab, Ashrita and everyone else for all their support. Last but never the least, I thank my parents, for their wholehearted and unflinching support all through which was essential. I hope now you will see me back home in the evenings. And this is for you.
