LIST OF PLATE

PLATE - I

Photo 1. Field photograph showing exposure at Jhurio Dome.
Photo 2. Field photograph showing fossiliferous oolitic limestone.
Photo 3. Field photograph showing gypsiferous shale.
Photo 4. Field photograph showing tabular cross bedding.
Photo 5. Field photograph showing trough cross bedding.
Photo 6. Field photograph showing thin lamination with mud-drapes.

PLATE - II

Photo 1. Field photograph showing trace fossil.
Photo 2. Field photograph showing alternate beds of purple sandstone.
Photo 3. Field photograph showing ripple marks.
Photo 4. Field photograph showing herringbone cross bedding.
Photo 5. Field photograph showing hard, compact green limestone.
Photo 6. Field photograph showing mudcracks.

PLATE - III

Photo 1. Photomicrograph showing Microfacies A1 ~ SMF Type 12 (2.5X).
Photo 2. Photomicrograph showing Microfacies A2 ~ SMF Type 14 (10X).
Photo 3. Photomicrograph showing Microfacies A3 ~ SMF Type 15 (10X).
Photo 4. Photomicrograph showing Microfacies B1 ~ SMF Type 2 (10X).
Photo 5. Photomicrograph showing Microfacies B2 ~ SMF Type 3 (10X).
PLATE – IV
Photo 1. Photomicrograph showing Microfacies B3 ~ SMF Type 4 (10X).
Photo 2. Photomicrograph showing Microfacies B4 ~ SMF Type 11 (10X).
Photo 3. Photomicrograph showing Microfacies B5 ~ SMF Type 17 (10X).
Photo 4. Photomicrograph showing Microfacies B6 ~ SMF Type 18 (10X).

PLATE – V
Photo 1. Photomicrograph showing Floating, Point and Long contacts (5X).
Photo 2. Photomicrograph showing Concavo-convex contact (10X).
Photo 3. Photomicrograph showing Sutured contact (10X).
Photo 4. Photomicrograph showing Mechanical compaction and Silica overgrowth (10X).

PLATE – VI
Photo 1. Photomicrograph showing Feldspar grain corroded by Iron cement (10X).
Photo 2. Photomicrograph showing Quartz grain corroded by Carbonate cement. (10X).
Photo 3. Photomicrograph showing Carbonate cement replaced by Iron cement (10X).
Photo 4. Photomicrograph showing Glauconite cement replaced by Iron cement and Silty matrix (10X).

PLATE – VII
Photo 1. Photomicrograph showing deformed oolites with their outer cortices spalled off and replaced internally by sparry calcite (10X).
Photo 2. Photomicrograph showing partial dissolution of bioclast (2.5X).
Photo 2. Photomicrograph showing dolomite rhomb (10X).
Photo 4. Photomicrograph showing fibrous/drusy cement (2.5X).
Photo 5. Photomicrograph showing blocky cement (10X).
Photo 6. Photomicrograph showing rim cement developed around crinoid fragment that is replaced by micrite (10X).

PLATE – VIII

Photo 1. Photomicrograph showing sparry calcite cement replaced by micrite (10X).

Photo 2. Photomicrograph showing calcitization of aragonite bioclast by coarse calcite mosaic i.e. neomorphism (10X).

Photo 3. Photomicrograph showing borings, dissolution and porosity partially retained (10X).

Photo 4. Photomicrograph showing stylolite and resultant porosity (10X).

Photo 5. Photomicrograph showing fracture sparry calcite vein (10X).
