LIST OF FIGURES

Figure 1. Generalized tectonic map of India (compiled mainly from the tectonic map of India by the Geological Survey of India, 1963 and Oil and Natural Gas Commission, 1968).  

Figure 2. Geological map of the Lower Narmada Basin (Modified after Geological Survey of India map on 1 mm = 2 km scale, 1962 Edition).  

Figure 3. Geological map of Rajpipla–Jobat area, Lower Narmada Basin.  

Figure 4. Generalized stratigraphic column of the Cretaceous sedimentary rocks of the Lower Narmada Basin showing the relationship with overlying and underlying strata (After Robinson, 1967).  

Figure 5. Key to lithology types and sedimentary structures shown in the graphic logs of sections measured in the study area (Fig. 6 to 16).  

Figure 6. Graphic column of lithostratigraphic section measured in the Devganga river, near Surpan Village.  

Figure 7. Graphic column of lithostratigraphic section measured near Sadiwasan village.  

Figure 8. Graphic column of lithostratigraphic section measured near Rajawat Chiklee village.  

Figure 9. Graphic column of lithostratigraphic section measured near Galesar village.  

Figure 10. Graphic column of lithostratigraphic section measured near Mohan village.  

Figure 11. Graphic column of lithostratigraphic section measured near Kakanpur village.  

Figure 12. Graphic column of lithostratigraphic section measured near Umrali village.  

Figure 13. Graphic column of lithostratigraphic section measured near Walpur village.  

Figure 14. Graphic column of lithostratigraphic section measured near Hatwee village.
Figure 15. Graphic column of lithostratigraphic section measured near Tamria village.

Figure 16. Graphic column of lithostratigraphic section measured near Khurwat village.

Figure 17. Composite histogram of roundness of detrital grains, Cretaceous sandstone, Rajpipla - Jobat area.

Figure 18. Composite histogram of sphericity of detrital grains, Cretaceous sandstone, Rajpipla-Jobat area.

Figure 19. Bivariant plots of textural parameters of planar cross bedded sandstone facies: (A) mean size versus sorting, (B) mean size versus skewness.

Figure 20. Bivariant plots of textural parameters of planar cross bedded sandstone facies: (A) mean size versus kurtosis, (B) skewness versus sorting.

Figure 21. Bivariant plots of textural parameters of planar cross bedded sandstones facies: (A) Sorting versus kurtosis, (B) skewness versus kurtosis.

Figure 22. Bivariant plots of textural parameters of trough cross bedded sandstone facies: (A) mean size versus sorting, (B) mean size versus skewness.

Figure 23. Bivariant plots of textural parameters of trough cross bedded sandstone facies: (A) mean size versus kurtosis, (B) Skewness versus sorting.

Figure 24. Bivariant plots of textural parameters of trough cross bedded sandstone facies: (A) kurtosis versus sorting, (B) skewness versus kurtosis.

Figure 25. Bivariant plots of textural parameters of flaser bedded sandstone facies: (A) mean size versus sorting, (B) mean size versus skewness.

Figure 26. Bivariant plots of textural parameters of flaser bedded sandstone facies: (A) mean size versus kurtosis, (B) skewness versus sorting.

Figure 27. Bivariant plots of textural parameters of flaser bedded sandstone facies: (A) Sorting versus kurtosis, (B) skewness versus kurtosis.

Figure 28. Bivariant plots of textural parameters of horizontal and laminated bedded sandstone facies: (A) mean size versus sorting (B) mean size versus skewness.
Figure 29. Bivariant plots of textural parameters of horizontal and laminated bedded sandstone facies: (A) mean size versus kurtosis, (B) skewness versus sorting.

Figure 30. Bivariant plots of textural parameters of horizontal and laminated bedded sandstone facies: (A) kurtosis versus sorting, (B) skewness versus kurtosis.

Figure 31. Vertical variation in grain size parameters, Surpan section.

Figure 32. Vertical variation in grain size parameters, Galesar section.

Figure 33. Vertical variation in grain size parameters, Mohan section.

Figure 34. Vertical variation in grain size parameters, Khurwat section.

Figure 35. Vertical variation in grain size parameters, Walpur section.

Figure 36. Vertical variation in grain size parameters, Tamria section.

Figure 37. Composite histogram based on aggregate data on grain contact, Cretaceous sandstones, Rajpipla-Jobat area.

Figure 38. Effects of textural parameters on compaction, Cretaceous sandstones, Rajpipla-Jobat area.

Figure 39. Relationship between total porosity and depth of burial for sedimentary rocks (After McCulloch, 1967).

Figure 40. Dependence of porosity on depth of burial in Mesozoic and Upper Paleozoic deposits of Pre-caspian Depression (After Lapinskaya and Proshlyakov, 1970).

Figure 41. Provisional compositional fields indicative of sand derivation from different types of provenance (See Dickinson, 1985, page 340). (A) Qm-F-Lt diagram, (B) Qt-F-L diagram.

Figure 42. Actual reported distribution of mean detrital modes for sandstone suites derived from different types of provenances (See Dickinson, 1985, page 340) samples of the Cretaceous sandstones of Rajpipla-Jobat area are represented as points on the diagrams. (A) Qt-F-L diagram; (B) Qm-F-Lt diagram.
Figure 43. (A) Set thickness and (B) Inclination of foresets of large scale crossbedding, Cretaceous sandstones, Rajpipla-Jobat area. 136

Figure 44. Palaeocurrents rose diagram based on large scale cross bedding azimuths at different localities, Cretaceous sandstones, Rajpipla-Jobat area. 139

Figure 45. Sector-level and area composite palaeocurrent rose diagrams based on large scale crossbedding azimuths, Cretaceous sandstones, Rajpipla-Jobat area. 141

Figure 46. Cretaceous facies associations in the eastern sector of Rajpipla-Jobat area, Lower Narmada basin. 165

Figure 47. Cretaceous facies changes in the Western sector of Rajpipla-Jobat area, Lower Narmada basin. 167
