ACKNOWLEDGMENT

At first let me express my endless thanks to Almighty, who is our expression for all forces and powers, which we do not understand or with which we all are unfamiliar.

I express my deep sense of gratitude, indebtedness to Prof. R. D. Gupta, (Rtd.) and Professor, S. Q. A. Naqvi, the Department of Civil Engineering, Aligarh Muslim University, Aligarh, for their valuable guidance, cooperation and encouragement in pursuance of this work. Their painstaking efforts in going through the manuscript, giving suggestion for its improvement and personal interest in the work can not be described in words.

I am extremely thankful to Dr. S. Q. A. Naqvi, Professor & Chairman, Department of Civil Engineering, Aligarh Muslim University, Aligarh for providing various facilities during the course of this work. I have deep sense of gratitude for the faculty
members of the Department of Civil Engineering for their cooperation and inspiration.

The cooperation secured from the staff of ash handling units of Harduagnag, Badarpur and Dadri, Thermal Power Stations is highly acknowledged.

My hearties gratitude to Professor S. Iqbal Ali, Principle University Polytechnic, and Professor M. Jameel, Department of Civil Engineering who encouraged me to pursue Ph. D. programme.

I reserved my affectionate appreciation to my wife Lubna who always encouraged me to complete this Thesis.

The humble thanks for all those who, in any way, directly or indirectly put a helping hand in every bit of this investigation.

(Javed Alam)
