LIST OF FIGURES

Page No.

Figure 4.1  Gradation curve for Dadri Flyash  33
Figure 4.2  Gradation curve for Badarpur Flyash  34
Figure 4.3  Gradation curve for Harduaganj Flyash  35
Figure 4.4.  Gradation curve for Fine Sand  36
Figure 4.5  Gradation curve for Coarse Sand  37
Figure 5.1  Variation of ‘K’ with $d_{50}$ for Dadri, Badarpur and Harduaganj flyash  45
Figure 5.2  Variation of ‘K’ with $d_{50}$ in case of fine sand and coarse sand  48
Figure 5.3  Variation of permeability ‘K’ with porosity ‘f’  51
Figure 5.4  Variation of ‘K’ with percentage of cement for mixture of 60% 45 micron and 40%125 micron  56
Figure 5.5  ‘K’ Vs percentage of cement for Dadri flyash  58
Figure 5.6  ‘K’ Vs percentage of cement for fine sand  59
Figure 5.7  ‘K’ Vs percentage of cement for coarse sand  60
Figure 5.8  Variation of ‘K’ with mixture of cement & flyash from Dadri, Badarpur and Harduaganj power stations  63
Figure 5.9  Variation of compressive strength of flyash from various sources mixed with known percentage of cement at constant porosity 67

Figure 5.10 Variation of permeability ‘K’ of Flyash mixed with percentage of lime (0-100%) 70

Figure 5.11 Variation of compressive strength of cubes made of flyash lime mixture with percentage lime (10-100%) 72

Figure 5.12 Variation of permeability of fine sand with flyash 77

Figure 5.13 Variation of permeability of coarse sand with flyash 78

Figure 5.14 Variation of permeability ‘K’ with percentage of cement in case of 80%. Flyash, 20% fine sand mixture and 60% flyash 40% coarse sand mixture 80

Figure 5.15 Variation of compressive strength with percentage of cement in case of 80% flyash, 20% fine sand and 60% flyash, 40% coarse sand mixture 82
