List of Tables

3.1. Linear absorption coefficient of anthraquinone dyes 72
3.2. Third-order nonlinear optical parameters of anthraquinone dyes 85
3.3. Recently reported values of $\beta$ and $\gamma (n_2)$ of different materials with CW laser (632.8 and 635 nm 532, 632.8, 633, 657.2 wavelength) excitation 92
3.4. Optical power limiting threshold and clamping values of anthraquinone dyes at various concentrations 94
3.5. Recently reported optical limiting threshold values of different materials with CW laser excitation 98
4.1. Linear absorption coefficient $\alpha_0$ of conducting polymers in DMF at various concentrations 112
4.2. FTIR characteristic bands of conducting polymers 115
4.3. Third-order nonlinear optical parameters of 0.05 mg/ml concentrations of conducting polymers in DMF 119
4.4. Optical limiting and clamping values of conducting polymers at various concentrations in DMF 123
5.1. Linear absorption coefficient $\alpha_0$ of copolymers of aniline in DMF 138
5.2. FTIR characteristic bands of copolymers of aniline 142
5.3. Third-order nonlinear optical parameters of copolymers of aniline at concentration 0.05 mg/ml in DMF 146
5.4. Optical limiting and clamping values of copolymers of aniline (using $H_2SO_4$) in DMF 155
5.5. Optical limiting and clamping values of copolymers of aniline (using HCl) in DMF 155
