I thank Professor Shafiullah, my mentor, for his outstanding guidance, indispensible support, constructive criticism and unbound affection during the whole tenure of this work. His personal attention and academic competence will always be a source of inspiration to me. There are moments in the life of a human being when an individual means so much that he becomes a corner stone for one's progress. Therefore, Professor M. Shahabuddin Ahmad will always be remembered by me as I cross one mile stone and another of my life. Once again I would like to thank him for his positive role in my career building. I would like to take an opportunity to put on record my deepest thanks and appreciation for Professor H. Takayanagi, School of Pharmaceutical Sciences, Kita Sato University, 9-1 Shirokane, 5-Chome, Minato Ku, Tokyo-108, Japan, who like an invisible soul behind this work contributed immensely. His outstanding contribution for spectral recording made this thesis possible.

I feel pleasure to record my sincere thanks to Dr. K.M. Yusuf Amin, Reader, Department of Ilmul Advia, A.K. Tibbiya College, A.M.U. for his benevolent guidance so as to carry out the pharmacological work. I am thankful to Dr. M. Mushfig, Reader, Department of Chemistry, for his unstined generous help round the clock. I am thankful to Prof. N. Islam, Chairman, Department of Chemistry for providing necessary facilities.
I am deeply indebted to my Parents whose inspiration was the only source behind my academic career. I owe much to my brothers for their sacrifices as they had to bear with me. I am grateful to my well wishers, friends and reasearch colleagues, Kr. Jawaid Iqbal, Dr. Riyazuddeen, Mr. Jamal Feroz, Miss Thresiamma Manuel and Miss Sheeba Salamat.

At last but not least, the thanks are to Mr. H.S. Sharma for typing the manuscript with patience.

Financial assistance from Council of Science and Technology, U.P. is gratefully acknowledged.

(RAO UWAIS AHMAD KHAN)
