13. Effect of four basal levels of phosphorus on crop growth rate (g/m²/day) of three varieties of chickpea calculated at four growth intervals. 92-93

14. Effect of four basal levels of phosphorus on relative growth rate (x 10⁻⁵ g/g/day) of three varieties of chickpea calculated at four growth intervals. 93-94

15. Effect of four basal levels of phosphorus on net assimilation rate (g/m²/day) of three varieties of chickpea calculated at three growth intervals. 94-95

16. Effect of four basal levels of phosphorus on shoot nitrogen accumulation (mg/plant) of three varieties of chickpea determined at five stages of growth. 95-96

17. Effect of four basal levels of phosphorus on shoot phosphorus accumulation (mg/plant) of three varieties of chickpea determined at five stages of growth. 96-97

18. Effect of four basal levels of phosphorus on shoot potassium accumulation (mg/plant) of three varieties of chickpea determined at five stages of growth. 97-98

19. Effect of four basal levels of phosphorus on yield parameters of three varieties of chickpea. 98-99

20. Effect of four basal levels of phosphorus on yield parameters and seed protein content of three varieties of chickpea. 99-100

21. Effect of four basal levels each of phosphorus and potassium on branch number per plant of chickpea var. Pusa 417 noted at five stages of growth. 100-101

22. Effect of four basal levels each of phosphorus and potassium on leaf area index of chickpea var. Pusa 417 calculated at four stages of growth. 102-103
23. Effect of four basal levels each of phosphorus and potassium on shoot dry weight (g/plant) of chickpea var. Pusa 417 recorded at five stages of growth. 102-103

24. Effect of four basal levels each of phosphorus and potassium on nodule number per plant of chickpea var. Pusa 417 observed at four stages of growth. 103-104

25. Effect of four basal levels each of phosphorus and potassium on nodule dry weight (g/plant) of chickpea var. Pusa 417 recorded at four stages of growth. 104-105

26. Effect of four basal levels each of phosphorus and potassium on nitrogenase activity [μ mol C₂H₄ (g FW nodules)⁻¹ h⁻¹] of chickpea var. Pusa 417 estimated at four stages of growth. 105-106

27. Effect of four basal levels each of phosphorus and potassium on root dry weight (g/plant) of chickpea var. Pusa 417 recorded at five stages of growth. 106-107

28. Effect of four basal levels each of phosphorus and potassium on crop growth rate (g/m²/day) of chickpea var. Pusa 417 calculated at four growth intervals. 106-107

29. Effect of four basal levels each of phosphorus and potassium on relative growth rate (x 10⁻⁷ g/g/day) of chickpea var. Pusa 417 calculated at four growth intervals. 106-107

30. Effect of four basal levels each of phosphorus and potassium on net assimilation rate (g/m²/day) of chickpea var. Pusa 417 calculated at three growth intervals. 107-108

31. Effect of four basal levels each of phosphorus and potassium on shoot nitrogen accumulation (mg/plant) of chickpea var. Pusa 417 determined at five stages of growth. 108-109
32. Effect of four basal levels each of phosphorus and potassium on shoot phosphorus accumulation (mg/plant) of chickpea var. Pusa 417 determined at five stages of growth. 109-110

33. Effect of four basal levels each of phosphorus and potassium on shoot potassium accumulation (mg/plant) of chickpea var. Pusa 417 determined at five stages of growth. 110-111

34. Effect of four basal levels each of phosphorus and potassium on yield parameters of chickpea var. Pusa 417. 111-112

35. Effect of four basal levels each of phosphorus and potassium on yield parameters and seed protein content of chickpea var. Pusa 417. 112-113

36. Effect of three sources of spray phosphorus applied once or twice (in equal splits) on branch number per plant of chickpea var. Pusa 417, grown with three levels of basal phosphorus. 114-115

37. Effect of three sources of spray phosphorus applied once or twice (in equal splits) on leaf area index calculated at 120 DAS of chickpea var. Pusa 417, grown with three levels of basal phosphorus. 115-116

38. Effect of three sources of spray phosphorus applied once or twice (in equal splits) on shoot dry weight (g/plant) of chickpea var. Pusa 417, grown with three levels of basal phosphorus. 116-117

39. Effect of three sources of spray phosphorus applied once or twice (in equal splits) on nodule number per plant observed at 120 DAS of chickpea var. Pusa 417, grown with three levels of basal phosphorus. 116-117

40. Effect of three sources of spray phosphorus applied once or twice (in equal splits) on nodule dry weight (g/plant), recorded at 120 DAS of chickpea var. Pusa 417, grown with three levels of basal phosphorus. 116-117
41. Effect of three sources of spray phosphorus applied once or twice (in equal splits) on nitrogenase activity [μ mol C₂H₄ (g FW nodule)⁻¹ h⁻¹] estimated at 120 DAS of chickpea var. Pusa 417, grown with three levels of basal phosphorus. 116-117

42. Effect of three sources of spray phosphorus applied once or twice (in equal splits) on root dry weight (g/plant) of chickpea var. Pusa 417, grown with three levels of basal phosphorus. 117-118

43. Effect of three sources of spray phosphorus applied once or twice (in equal splits) on crop growth rate (g/m²/day) determined at 120-150 days interval of chickpea var. Pusa 417, grown with three levels of basal phosphorus. 117-118

44. Effect of three sources of spray phosphorus applied once or twice (in equal splits) on relative growth rate (x 10⁻³ g/g/day) determined at 120-150 days interval of chickpea var. Pusa 417, grown with three levels of basal phosphorus. 117-118

45. Effect of three sources of spray phosphorus applied once or twice (in equal splits) on shoot nitrogen accumulation (mg/plant) of chickpea var. Pusa 417, grown with three levels of basal phosphorus. 118-119

46. Effect of three sources of spray phosphorus applied once or twice (in equal splits) on shoot phosphorus accumulation (mg/plant) of chickpea var. Pusa 417, grown with three levels of basal phosphorus. 118-119

47. Effect of three sources of spray phosphorus applied once or twice (in equal splits) on shoot potassium accumulation (mg/plant) of chickpea var. Pusa 417, grown with three levels of basal phosphorus. 118-119
48. Effect of three sources of spray phosphorus applied once or twice (in equal splits) on yield parameters of chickpea var. Pusa 417, grown with three levels of basal phosphorus. 120-121

49. Effect of three sources of spray phosphorus applied once or twice (in equal splits) on yield parameters and seed protein content of chickpea var. Pusa 417, grown with three levels of basal phosphorus. 121-122

50. Effect of three sources of basal phosphorus on branch number per plant of three varieties of chickpea noted at five stages of growth. 122-123

51. Effect of three sources of basal phosphorus on leaf area index of three varieties of chickpea calculated at four stages of growth. 123-124

52. Effect of three sources of basal phosphorus on shoot dry weight (g/plant) of three varieties of chickpea recorded at five stages of growth. 124-125

53. Effect of three sources of basal phosphorus on nodule number per plant of three varieties of chickpea observed at four stages of growth. 124-125

54. Effect of three sources of basal phosphorus on nodule dry weight (g/plant) of three varieties of chickpea recorded at four stages of growth. 125-126

55. Effect of three sources of basal phosphorus on nitrogenase activity [µ mol C₂H₄ (g FW nodule)⁻¹h⁻¹] of three varieties of chickpea estimated at four stages of growth. 125-126

56. Effect of three sources of basal phosphorus on root dry weight (g/plant) of three varieties of chickpea studied at five stages of growth. 126-127

57. Effect of three sources of basal phosphorus on crop growth rate (g/m²/day) of three varieties of chickpea calculated at four growth intervals. 127-128
58. Effect of three sources of basal phosphorus on relative growth rate \((x \times 10^{-3} \text{g/g/day})\) of three varieties of chickpea calculated at four growth intervals. 127-128

59. Effect of three sources of basal phosphorus on net assimilation rate \((\text{g/m}^2/\text{day})\) of three varieties of chickpea calculated at three growth intervals. 128-129

60. Effect of three sources of basal phosphorus on shoot nitrogen accumulation \((\text{mg/plant})\) of three varieties of chickpea determined at five stages of growth. 128-129

61. Effect of three sources of basal phosphorus on shoot phosphorus accumulation \((\text{mg/plant})\) of three varieties of chickpea determined at five stages of growth. 129-130

62. Effect of three sources of basal phosphorus on shoot potassium accumulation \((\text{mg/plant})\) of three varieties of chickpea determined at five stages of growth. 129-130

63. Effect of three sources of basal phosphorus on yield parameters of three varieties of chickpea. 130-131

64. Effect of three sources of basal phosphorus on yield parameters and seed protein content of three varieties of chickpea. 131-132

65. Correlation of shoot \(N, P\) and \(K\) accumulation with nitrogenase activity of nodules \((60 \text{ DAS in Experiment 2 and 4 and 120 DAS in Experiment 3})\). 148-149

66. Correlation of various parameters with seed yield and seed protein content of chickpea (Experiment 1). 158-159

67. Correlation of various parameters with seed yield and seed protein content of chickpea (Experiment 2). 158-159
Correlation of various parameters with seed yield and seed protein content of chickpea (Experiment 3). 158-159

Correlation of various parameters with seed yield and seed protein content of chickpea (Experiment 4). 158-159
