ACKNOWLEDGEMENTS

I bow in reverence to GOD the Almighty, Who blessed me with an innumerable favour of academic work.

Like all creative works, completing a thesis in any discipline is really a hard work to accomplish. I have no words to express my heartfelt gratitude to my supervisor Professor Nafees A. Khan, Department of Botany, Aligarh Muslim University, Aligarh for his excellent guidance, valuable and timely suggestions, stimulating discussions and academic alertness, sense of perfection and precision which enabled me to complete this work. His affectionate instinct and constant encouragement were always been boon to me. Without his unending support and encouragement this thesis would have never been completed.

I am extremely obliged to Professor Ainul H. Khan, Chairman, Department of Botany for providing necessary research facilities. Thanks in this regard are also due to Ex-Chairman Professor Samiullah.

I have always been inspired by my respected teachers. I duly acknowledge their moral support. I am also thankful to my friend Ms. Priya and lab colleagues Ms. Rahat Nazar and Ms. Noushina Iqbal for the help they extended whenever required.

I also place on record the assistance rendered by Dr. Naser A. Anjum, Dr. Moinuddin Khan, Dr. Asgar Ali Shah, Dr. Lamabam Peter Singh, Dr. Sandeep Sharma, Dr. Naeem, Dr. Jarrar Ahmad, Dr. Shuaib Khan, Dr. Riyasat Ali and Mr. Rais A. Khan during the gruelling task.

I am also thankful to the Council of Scientific and Industrial Research, Government of India, New Delhi for providing financial assistance as Senior Research Fellowship to me.

Finally, I would like to express my greatest gratitude to people who gave me the greatest encouragement and motivation to carry out my research work; my parents, paternal aunt Surjit, brothers Gurvinder, Dev and Ranjeet and sister Jasbeer.

(Sarvajeet Singh)
