LIST OF TABLES

Table 1.1. Assays of drugs in pharmaceutical formulations by UV-visible spectrophotometric procedures. 12

Table 1.2. Single-component methods without error compensation. 18

Table 1.3. Validation of analytical methods International definitions. 22

Table 1.4. Validation characteristics normally evaluated for the different types of test procedure [176] and the minimum number of determinations required (if applicable) [177]. 25

Table 1.5. Quantitative approaches to demonstrate accuracy according to ICH [177]. 29

Table 1.6. Requirements for different calibration modes with relevant parameters. 31

Table 1.7. Approaches for determining the detection and quantitation limit [177]. 33

Table 2.1. Optical and regression characteristics of fixed time method. 77

Table 2.2. Intra day assay: Evaluation of the accuracy and precision of the initial rate and fixed time methods. 83

Table 2.3. Intra day assay: Test of precision of the proposed methods in pharmaceutical formulations. 84

Table 2.4. Inter day assay: Evaluation of the accuracy and precision of the initial rate and fixed time methods. 85

Table 2.5. Inter day assay: Test of precision of the proposed methods in pharmaceutical formulations. 86

Table 2.6. Standard addition method for the determination of norfloxacin in dosage forms by initial and fixed time methods. 87
Table 2.7. Point hypothesis: Comparison of the proposed methods with the reference method at 95% confidence level.

Table 2.8. Interval hypothesis: Comparison of the proposed methods with the reference method at 95% confidence level.

Table 3.1. Optical and regression characteristics of the proposed methods.

Table 3.2. Point hypothesis test: comparison of the proposed methods with the reference method at 95% confidence level.

Table 3.3. Interval hypothesis test: comparison of the proposed methods with the reference method at 95% confidence level.

Table 4.1. Spectral and statistical data for the determination of ramipril by initial rate method.

Table 4.2. Spectral and statistical data for the determination of ramipril by fixed time method.

Table 4.3. Intra day assay: test of precision of the proposed methods for the determination of ramipril.

Table 4.4. Inter day assay: test of precision of the proposed methods for the determination of ramipril.

Table 4.5. Determination of ramipril in drug formulations by standard addition method.

Table 4.6. Point hypothesis test: comparison of the proposed methods with the reference method at 95% confidence level.

Table 4.7. Interval hypothesis test: comparison of the proposed methods with the reference method at 95% confidence level.

Table 5.1. Optical and statistical profiles of the initial rate method.
Table 5.2. Optical and statistical profiles of the fixed time method. 163
Table 5.3. Intra day assay: repeatability data of the proposed methods. 164
Table 5.4. Inter day assay: repeatability data of the proposed methods. 165
Table 5.5. Applicability of the proposed methods in pharmaceutical formulations by standard addition method. 167
Table 5.6. Point hypothesis test: comparison of the proposed methods with the reference method at 95% confidence level. 168
Table 5.7. Interval hypothesis test: comparison of the proposed methods with the reference method at 95% confidence level. 169
