ACKNOWLEDGEMENT

I am benefited from the criticism and advice of my supervisor Dr. Naheed Banu. Her extensive and detailed discussions have added so much to shaping my thoughts on clinical biochemistry that it is impossible to acknowledge the contribution in detail. She not only motivated me to work but dealt promptly and patiently with all my questions.

To solve the obscuring rather than the clarifying nature of the problems is a difficult task and for this I am indebted to Prof. S.M. Hadi (Chairman, Department of Biochemistry) and Prof. M. Saleemuddin for their kind co-operation and for providing necessary research facilities. Thanks are also due to Prof. Yousfi, Prof. Masood Ahmad, Dr. Faheem and other teachers of the department for kind help and suggestions.

It gives me immense pleasure to express my profound sense of gratitude to His Highness M. Muheasin (Ambassador), M. Khawaldeh (Cultural Council), F. Qaazi (Cultural attache), A. Azzam, B. Abu Karaki, Ishfaq and other members of the embassy of Hashimite kingdom of Jordan, N. Delhi, for constant support and unending encouragement throughout the course of this study.

Thanks are due to Drs. of J. N. Medical College, AMU, specially Gazala, Shakeel Ahmad and Veena Maheshwari (Department of Pathology), Abu Qamar (Department of Psychiatry) and Md. Yaseen (Department of Surgery) for providing necessary facilities.
Behind the compiled dream lies the struggling spirit of my brother Dr. Ahmad H. Khataibeh who made me what I am today.

I am greatful to all my Lab mates and friends who at one stage or the other encouraged and helped me.

Thanks are due to my Jordanian friends who made me feel at home.

Financial assistance from University Grant Commission is gratefully acknowledged.

At last but not the least, I shall remain thankful to my patients for extending their co-operation and pay homage to my experimental animals who sacrificed their lives for the advancement of knowledge and benefit to the humanity.

(Moayad H. Khataibeh)
