ACKNOWLEDGEMENTS

In the interest of readability, most references cited in this dissertation/thesis have been acknowledged and details listed at the end of each chapter and not at the end of the thesis.

This researcher is extremely grateful to Dr. Sharmila Thakur formerly of the All India Management Association, New Delhi (AIMA), who immediately after the start of the programme for the Executive Doctorate in Business Administration by the AIMA motivated him to register for this course. After considering his background, knowledge and interests advised him in which area to specialize in and on how to register with the Institute of Management Studies of the Devi Ahilya Vishwa Vidyalaya, Indore (DAVV) for registration for the Doctor of Philosophy of the said University.

This researcher is grateful to Prof. Parag Dewan, Dr. Vidya Garg and other office bearers of the AIMA for the assistance granted to him to register for the Doctor of Philosophy entitled the Executive Doctorate in Business Administration of the Aligarh Muslim University after the Institute of Management Studies of the DAVV did not respond to this researcher’s request to formally confirm the registration for the Doctor of Philosophy of the DAVV.

This researcher is extremely grateful to his internal adviser Prof. Azhar Kazmi, who is a leading expert in strategic management and who was the then Dean of the faculty of Management Studies who even after going abroad from the Aligarh Muslim University continued to provide time to advise him. This researcher is also extremely grateful to his external adviser Dr. S.R. Ganesh who has completed his doctorate from the London Business School who was always willing to provide time for discussion and evaluation of ideas. This researcher is also extremely grateful to Prof. S.M. Ozair, the present Dean of the Faculty of
Management Studies & Research, Aligarh Muslim University who despite his extremely busy schedule has taken keen interest and great pains to listen to his presentations, correct mistakes, give him guidance on repositioning of various points in the chapters, inspire him to see that the standard of the research for this thesis is world class, assist in formatting the thesis to bring it within the departmental guidelines for the writing of a thesis for the award of the Doctor of Philosophy.

This researcher thanks Prof. Christensen, of the Harvard Business School for permission to quote from his paper “Competitive Advantage Whence it Came and Where it Went”.

This researcher cannot forget the assistance given to him by Mr. N.L. Lakhanpal, then Principal Secretary (Finance) Government of Maharashtra, later the Director General of Foreign Trade, who assisted him in obtaining the approval of the Government of Maharashtra for financially supporting this researcher, to reimburse the fees paid.

This researcher is grateful to Dr. Rakesh Mohan, former Director General of the National Council of Applied Economic Research, New Delhi (now the Deputy Governor of the Reserve Bank of India) for his inaugural address at the five-day Management Development Programme for Indian Administrative Service (IAS) officers on Industrial policy, planning and development in 1997 at the Indian Institute of Management, Ahmedabad, Gujarat giving details of the report on Indian infrastructure prepared by a committee under his chairmanship and motivating this researcher to focus on infrastructure requirements for competitive advantage of Indian states as one of the important points for this thesis/dissertation and later permitting him to use the excellent library facilities at the National Council of Applied Economic Research, New Delhi which was of great help in gathering the data for this dissertation/thesis.
This researcher is grateful to the inspiration and information given to him by the works of Prof. Michael E. Porter, of the Institute of Strategy and Competitiveness of the Harvard Business School on Competitive Strategy (1980 and with a new introduction in 1998), Cases in Competitive strategy (1983), Competitive Advantage of Firms (1985), The Competitive Advantage of Nations (1990), his various articles and reports on the competitive advantage of Turkey, New Zealand, his latest work entitled ‘On Competition’ (1998) and his study on Canada in a report called ‘Canada At the Crossroads’. He is also obliged to Prof. Porter (for his work on the Current Competitiveness Index for the Global Competitiveness Report 2000 and 2001 for the WEF), Prof. Jeffrey D. Sachs, Centre for International Development of the Harvard University (HCID) (for his work on the Global Competitiveness Index (prior to 2000 this was the Competitiveness Index) and the growth prospects of various countries for the Global Competitiveness Report 2000 for the WEF), Prof. John W. McArthur, HCID and Peter Cornelius of the WEF (for their work on the Executive Opinion Surveys (a method not adopted by this researcher) for the Global Competitiveness Report 2000 for the WEF) all of which led to formulation of the 58 factors to measure the competitiveness and competitive advantage of Indian states.

Acknowledgement must be made of the help and assistance provided by the Librarians of the Vikram Sarabhai Library of Indian Institute of Management (IIM), Ahmedabad (where this researcher was able to access the Econlit on current research in competitiveness and decide on the subject of the research); of the library at the IIM, Bangalore (where he was for a Management Development Programme (MDP) on the Opening up of the Indian Economy before he attended the MDP at the IIM, Ahmedabad which assisted him in deciding finally
on the area of the research); of the Indian Institute of Foreign Trade (IIFT), New Delhi (of which the researcher is an Associate Member (Life) and where he was able to obtain copies of many of the papers, references (including the book ‘On Competition’ written by Prof. Porter, etc. quoted in the thesis/dissertation); of the British Council Library in Mumbai (from where he was able to obtain copies of many of the books written by Prof. Porter viz. Competitive Strategy (with the new introduction in 1998), Cases in Competitive strategy (1983), The Competitive Advantage of Nations (1990) and other books on the subject); of the library at the National Council of Applied Economic Research, New Delhi (which the researcher was able to consult thanks to the librarian Mr. Sebastian); of the India Habitat Centre, New Delhi (where this researcher is an Associate Member); to Ms. Hema Balasubramanyam, Librarian with the World Bank Library at Lodi Estate, New Delhi who permitted this researcher to access the excellent monographs and other facilities available there; and to Mrs. Tilaka Joseph, Librarian at the Fort Library of the University of Mumbai.

This researcher must place on record that he was neither able to get the criteria used by the National Productivity Council (NPC) for their 1994 study nor whether an update had been done from the NPC. He was only able to obtain the copy of the NPC study through the help of Prof. Archana Shukla of the IIM, Lucknow, who was his course director on the course in Managerial Effectiveness organized there. He is indebted to her because without this the methodology used for the calculations would not have been available to him and he would not have been able complete Chapter 7 of the thesis.

This researcher is grateful to Prof. Per V. Jenster, Professor of Business Administration, Copenhagen Business School, Denmark for his prompt reply to the e-mail of this researcher
of February 13, 2001 clarifying that the critical issue in each of the items to measure competitiveness is the weighting of the variables, and for this the methodology used by him was simple, robust, yet not very sophisticated. He and Dr. Geoffrey M. Rubin gave a rating from 1 to 3 of the strategically importance of each variable related to national competitiveness.

This researcher is grateful to the various Principal Secretaries in the Finance Department, Principal Secretaries of the Planning Department, Secretary and Principal Secretary (Industries), Development Commissioner (Industries) of the Government of Maharashtra for permitting him access to various reports of the Reserve Bank of India, financial information, Economic Surveys, other information on compact disks, available from the Maharashtra Economic Development Council, World Trade Centre, Mumbai and the information/data available in the files of the Government of Maharashtra which (even though in the public domain) are not easily accessible to outsiders, to his colleagues in the IAS of the Government of Maharashtra, in other state cadres and the Government of India for providing him information, access to various reports which (even though in the public domain) are not easily accessible to persons outside.

He is also grateful to officers of the other Departments of the Government of Maharashtra, other states and the Government of India who helped him identify and access various sources of information which are normally not available to researchers. He would in particular place on record his gratefulness to his close friend and batchmate in the IAS Dr. S.K. Pachauri, former Secretary of the Lieberhans Commission of Inquiry, now Director General of the National Productivity Council who despite his extremely busy schedule always spared time, that too without prior notice and discussed, persuaded, cajoled
(and warned this researcher of the difficulties) to register for and do a doctorate (like Dr. S.K. Pachauri had himself done) in an economic or management subject, so that he can go ahead and join the corporate world as an expert, after retirement, for which a doctorate is absolutely necessary.

This researcher is extremely grateful to and all his contacts and sources (in particular Dr. Mark Robinson formerly of the Ford foundation, New Delhi and now with the Institute of Development Studies in Sussex, U.K.) most of whom cannot be named, being numerous who heard him, asked him probing questions, criticized his ideas and gave him information/suggestions in the various presentations, seminars and workshops (such as the one on some aspects of good governance in Maharashtra for the International workshop on contemporary issues in Public Policy and Governance organized by the Institute of Applied Manpower research at New Delhi between October 15-19, 2001) where this researcher propounded the theory of division of India into states in the north-east (which were more than only the BOMARU states of P.R. Brahmananda (propounded in his series of articles in the Hindu Business Line beginning with the issue of July 1, 2000)) and south-west with differences in competitive advantage, foreign direct investment (FDI), etc., due not only to differences in availability of infrastructure, trained manpower, etc., but also because of differences in perception of corruption and the inverse linkage between competitive advantage and corruption (which has been recently supported by an article by Prof. Jeffrey D. Sachs Professor of Economics and Director of the Center for International Development, Harvard University, Cambridge, Massachusetts, U.S.A. published in the Economic Times(7th November 2001) ("How Competitive are we?")", and in general assisted him in finally modifying the theory of the north-east south-west divide in competitive advantage to its
present form, inverse linkage of FDI and competitive advantage, with the perception of
difference in levels of corruption among Indian states and how this was linked to the position
with regard to the stage of economic development of various states in India.

This researcher wishes to thank Mrs. Choukar and her colleagues of the Confederation of
Indian Industry (CII), Mumbai who provided him a copy of the report ‘How are the States
Doing’ a study by the Rajiv Gandhi Institute for Contemporary Studies (RGICS) for the CII
(September 2000), which gave him much data on the relative/ comparative position of Indian
states on various parameters to determine their competitiveness. Many of the parameters are
quite different from those used by the WEF, IMD because of the fact that for many areas/
subjects state wise data are not available for most Indian States, certain areas/ subjects (such
as Central Government debt, inward foreign direct institutional (FDI) investment, par value
of the Indian rupee vis-à-vis other currencies, etc.) are with the Central Government only and
a state wise breakup is not possible and the fact that this researcher had neither the time nor
the contacts/ resources to undertake a survey of decision makers/ get opinions of persons in
position/ authority and therefore did not even try to undertake such an opinion survey.

But for his access to the material available in these excellent libraries in Ahmedabad,
New Delhi and Mumbai, sources within the Departments of the Government of Maharashtra
and the Ministries of the Government of India, newspaper cuttings, information on the
internet, this researcher would never have been able to gather the amount of material required
for writing this meaningful thesis on a very interesting but difficult subject.

In these days of the internet and other modes of immediate accessibility to information
sometimes the source is not traceable/ indicated and at other times this acknowledgement is
not done through oversight. So, if this researcher has failed to acknowledge a particular source/reference/quotation, his apologies.

This researcher is extremely grateful to his Chief Secretaries for being extremely tolerant towards him during the period this research was being conducted and thesis/dissertation written.

Last but not the least this researcher is extremely grateful to his wife Mrs. Radha Singh, who by her own example of learning excellent golf at a fairly advanced age, motivated, persuaded and cajoled helped him throughout to persist in his research work despite many difficulties and setbacks and for her continuous encouragement to complete the thesis/dissertation quickly.

(Rajendra Singh)
