LIST OF TABLES

Table 1  Some of the key contributions in the field of chromatography.  2
Table 2  Synthesis and ion exchange properties of some important inorganic materials prepared earlier.  9
Table 3  Ion exchange properties of some important double salts prepared earlier.  20
Table 4  Some naturally occurring fatty acids.  28
Table 5  Synthesis, ion exchange capacity and chemical composition of stannic selenophosphate.  47
Table 6  Ion exchange capacity (pH \approx 6) of stannic selenophosphate (sample SSP_2) at 25 \pm 2^\circ C.  46
Table 7  Chemical stability of some Tin(IV) based ion exchangers.  50
Table 8  Effect of drying temperatures on exchange capacity of various Tin(IV) based ion exchangers.  54
Table 9  Distribution coefficients for some cations on stannic selenophosphate (SSP_2) in different mediums.  57
Table 10 Comparison of Kd values of metal ions on Tin(IV) based ion exchangers in water (pH \approx 6).  58
Table 11 Comparison of Kd values of metal ions on Tin(IV) based exchangers in 0.01M HNO_3 medium.  59
Table 12  Quantitative separation of metal ions on columns of stannic selenophosphate.  

Table 13  Comparison of preparation and properties of stannic selenophosphate with other Tin(IV) based ion exchangers.  

Table 14  Reproducibility of replicate determination of Uranium(VI).  

Table 15  Reproducibility of replicate determination of Uranium(VI).  

Table 16  Effect of foreign ions in the determination of Uranium(VI).
