List of tables

Table 5.1 Correlations between rainfall figures at two locations ........................................... 81
Table 6.1 Coverage details in villages during survey ................................................................. 90
Table 7.1 Table showing social characteristics of the respondents .......................................... 92
Table 7.2 Table showing social characteristics of the respondents .......................................... 93
Table 7.3 Table showing economic characteristics of the respondents ................................... 94
Table 7.3a Table showing economic characteristics of the respondents Cont .................. 95
Table 7.4 Table showing respondents’ stress level related to weather related risks........ 97
Table 7.5 Table showing respondent’s desire towards hedging of weather risk by paying some amount ................................................................................................................. 98
Table 7.6 Table showing respondent’s awareness and experience with old crop insurance schemes ........................................................................................................................................ 99
Table 7.7 Reasons for dissatisfaction with old crop insurance schemes ............................ 100
Table 7.8 Table showing non-subscribers’ awareness about and all respondents’ source of information about new crop insurance schemes ................................................................. 100
Table 7.9 Table showing respondents’ experience with new crop insurance schemes ........ 102
Table 7.10 Table showing respondents’ opinions on procedural issues ............................ 102
Table 7.11 Table showing respondents’ reasons for not insuring ....................................... 103
Table 7.12 Table showing people’s perception to weather derivative schemes as an aid to relieving financial stress ................................................................. 105
Table 7.13 Table showing weather factors which worry as being detrimental to crop yield ......................................................................................................................... 107
Table 7.14 Table showing weather variation levels at which hedging would be sought ......................................................... 108
Table 7.15 Table showing preference for period of weather derivatives ............................ 109
Table 7.16 Table showing preference for time-to-expiry of weather derivatives .......... 109
Table 7.17 Table showing interest in hedging date of monsoon arrival ............................ 109
Table 7.18 Table showing preference to payout for weather derivative ............................ 110
Table 7.19 Table showing preferences related to weather recording ............................. 111
Table 7.20 Table showing preferences related to group schemes .................................... 112
Table 7.21 Table showing preference to the agencies offering the schemes ..................... 113
Table 7.22 Reasons for selecting government schemes ...................................................... 113
Table 7.23 Distribution of responses to Bids for a WD with a payout of Rs. 1000 .... 116
Table 7.24 Responses related to monthly savings .............................................................. 116
Table 7.25 Responses related to surety of yield ................................................................. 117
Table 7.26 Responses related to worry about variability in yield of crop ...................... 118
Table 7.27 Responses related to choice of weather derivative contract indexes .......... 118
