ACKNOWLEDGEMENTS

It is as always a pleasure to record my sincere respect and deep sense of gratitude towards my supervisor, Prof. S.M. Hadi for his indispensible guidance, constant support, trust and unceasing encouragement throughout the course of this study. But for his keen interest and fruitful criticism, the present dissertation would not have seen the light of the day.

I am highly grateful to Prof. M. Saleemuddin, Chairman, Department of Biochemistry, Faculty of Life Sciences, for his profitable advice and research facilities provided to me. My special thanks to Prof. A.M. Siddiqi for his constant interest and helpful suggestions.

I have no words to express my feelings towards my husband Dr. Arshad Rahman who has always been a source of distinctive encouragement, inspiration and delightful distraction for me. I simply owe a great deal to him.

It is a privilege for me to thank all the teachers of the department and my lab colleagues, Rana, Said, Rashid, Qasim, Abraham and all the other research scholars in the laboratory for their keen interest and help at all levels. I have special thanks for my friends, Khursheed, Tabassum and Tauseef for their amicable help and understanding during the entire course of this investigation.

Council of Scientific and Industrial Research is gratefully acknowledged for providing financial assistance. I would also like to thank Akmal Bhai and Ishtiaq Bhai for expert word processing of the manuscript.

And finally and as always, I would like to thank my dear parents and my brothers Faizy, Faisal and Farrukh for their love, affection, moral support and patience they endowed upon me throughout.

(FABEHA FAZAL)
