List of Figures 2

1 Introduction 3

1.1 Inventory system ................................................. 4

1.1.1 Discrete Time Inventory Systems .......................... 7

1.2 Quasi-Birth-Death Processes ................................. 9

1.3 Matrix Analytic Methods ....................................... 10

1.4 Review of related work ........................................ 11

1.5 Summary of the thesis ......................................... 13

2 Discrete time inventory models with positive service time
and lead time

2.1 Introduction ................................................. 17

2.2 Mathematical Modelling and Analysis of model 1 ........ 19

2.2.1 Stability Condition ..................................... 21

2.2.2 Steady-state analysis ................................. 23

2.2.3 System Performance Measures ....................... 26

2.3 Mathematical Formulation of model 2 and its analysis .... 27

2.3.1 Stability Condition ..................................... 30

2.3.2 Steady-state analysis ................................. 32

2.3.3 System Performance Measures ....................... 34

2.4 Mathematical Formulation of model 3 and its analysis .... 35

2.4.1 Stability condition ................................. 36

2.4.2 Steady-state analysis ................................. 37

2.4.3 System Performance Measures ....................... 39

2.5 Cost Analysis ................................................. 40
3 Discrete Time inventory models with common life time and positive service time

3.1 Introduction

3.2 Description of Model-1

3.2.1 Analysis of the model

3.2.2 Stability Condition

3.2.3 Steady-state analysis

3.2.4 System Performance Measures

3.3 Description of Model-2

3.3.1 Analysis of the model

3.3.2 Stability condition

3.3.3 Steady-state analysis

3.3.4 System Performance Measures

3.4 Description of Model-3
3.4.1 Analysis of the model ........................................... 62
3.4.2 Stability Condition ........................................... 64
3.4.3 Steady-state analysis .......................................... 65
3.4.4 System Performance Measures ............................... 65
3.5 Cost Analysis ..................................................... 66
3.6 Numerical illustration and comparison of the performance of
the different models ............................................. 67

4 (s, S) policy with inventory dependent customer arrival 75

4.1 Introduction ..................................................... 75
4.2 Mathematical Formulation of Model 1 ........................ 76
4.3 Analysis of the model .......................................... 77
4.4 Long run System behaviour .................................... 79
4.5 System Performance Measures ................................. 80
4.6 Model 2 .......................................................... 81
4.7 Analysis ......................................................... 81
4.8 Stability condition ........................................... 84
4.9 Steady-state analysis .......................................... 85
4.10 System Performance Measures ............................. 86
4.11 Cost Analysis .................................................. 87

5 Discrete time \((s, S)\) production inventory system with positive service time 91

5.1 Introduction ..................................................... 91
5.2 The Mathematical model and its analysis .................. 92
5.3 Steady-state analysis .......................................... 96
5.4 System Performance Measures ............................. 99
5.5 Production cycle .............................................. 100
5.6 Cost Analysis ................................................... 102
5.7 Numerical illustration ........................................ 102

6 Discrete time inventory system with arbitrarily distributed service time 105
