List of tables

Table 1. *Pinus kesiya* plantation by State Forest Departments of North-East India

Table 2. Somatic emryogenesis in conifers

Table 3. Composition of different media used for initiation of somatic embryogenesis

Table 4. Developmental stages of immature zygotic embryos for initiation of somatic embryogenesis

Table 5. Effect of developmental stages of female gametophytes containing immature zygotic embryos on frequency of somatic embryogenesis

Table 6. Effect of different media and sucrose concentrations on initiation of embryogenic cultures from female gametophytes containing stage ‘c’ embryos

Table 7. Effect of different media and maltose concentrations on initiation of embryogenic cultures from female gametophytes containing stage ‘c’ embryos

Table 8. Effect of different media and lactose concentrations on initiation of embryogenic cultures from female gametophytes containing stage ‘c’ embryos

contd...
Table 9. Effect of different media and fructose concentrations on initiation of embryogenic cultures from female gametophytes containing stage ‘c’ embryos

Table 10. Effect of different media and sucrose concentrations on initiation of embryogenic cultures from mature-zygotic embryos

Table 11. Effect of different media and maltose concentrations on initiation of embryogenic cultures from mature zygotic embryos

Table 12. Effect of different media and lactose concentrations on initiation of embryogenic cultures from mature zygotic embryos

Table 13. Effect of different media and fructose concentrations on initiation of embryogenic cultures from mature zygotic embryos

Table 14. Effect of different media and sucrose concentrations on initiation of embryogenic cultures from secondary needles

Table 15. Effect of different media and maltose concentrations on initiation of embryogenic cultures from secondary needles

Table 16. Effect of different media and lactose concentrations on initiation of embryogenic cultures from secondary needles

Table 17. Effect of different media and fructose concentrations on initiation of embryogenic cultures from secondary needles

contd...
**Table 18.** Effect of different media and sucrose concentrations on initiation of embryogenic cultures from apical dome sections

**Table 19.** Effect of different media and maltose concentrations on initiation of embryogenic cultures from apical dome sections

**Table 20.** Effect of different media and lactose concentrations on initiation of embryogenic cultures from apical dome sections

**Table 21.** Effect of different media and fructose concentrations on initiation of embryogenic cultures from apical dome sections

**Table 22.** Effect of 2,4-D and NAA on initiation of embryogenic cultures from female gametophytes

**Table 23.** Effect of BAP on initiation of embryogenic cultures from female gametophytes

**Table 24.** Effect of 2,4-D and NAA on initiation of embryogenic cultures from mature zygotic embryos

**Table 25.** Effect of BAP on initiation of embryogenic cultures from mature zygotic embryos

**Table 26.** Effect of 2,4-D and NAA on initiation of embryogenic cultures from secondary needles

**Table 27.** Effect of BAP on initiation of embryogenic cultures from secondary needles

contd...
Table 28. Effect of 2,4-D and NAA on initiation of embryogenic cultures from apical dome sections

Table 29. Effect of BAP on initiation of embryogenic cultures from apical dome sections

Table 30. Effect of growth regulators on maintenance and multiplication of embryogenic calli from female gametophytes

Table 31. Effect of growth regulators on maintenance and multiplication of embryogenic calli from female gametophytes

Table 32. Effect of growth regulators on maintenance and multiplication of embryogenic calli from zygotic embryos

Table 33. Effect of growth regulators on maintenance and multiplication of embryogenic calli from zygotic embryos

Table 34. Effect of growth regulators on maintenance and multiplication of calli from secondary needles

Table 35. Effect of growth regulators on maintenance and multiplication of calli from secondary needles

Table 36. Effect of growth regulators on maintenance and multiplication of calli from apical dome sections

Table 37. Effect of growth regulators on maintenance and multiplication of calli from apical dome sections

contd...
Table 38. Effect of different carbohydrates at varying concentrations on initiation of embryogenic suspension cultures from embryogenic extrusions of female gametophytes and embryogenic calli of zygotic embryos

Table 39. Effect of different carbohydrates at varying concentrations on initiation of embryogenic suspension cultures from calli of secondary needles and apical dome sections

Table 40. Effect of 2,4-D and NAA in the media on initiation of embryogenic suspension cultures in SF and BCB from female gametophytes and zygotic embryos

Table 41. Effect of BAP in the media on initiation of embryogenic suspension cultures in SF and BCB from female gametophytes and zygotic embryos

Table 42. Effect of 2,4-D and NAA in the media on initiation of suspension cultures in SF and BCB from secondary needles and apical dome sections

Table 43. Effect of BAP in the media on initiation of suspension cultures in SF and BCB from secondary needles and apical dome sections

contd...
Table 44. Effect of inoculum density on initiation of embryogenic suspension cultures from embryogenic extrusions of female gametophytes and embryogenic calli of zygotic embryos

Table 45. Effect of inoculum density on initiation of embryogenic suspension cultures from calli of secondary needles and apical dome sections

Table 46. Effect of culture volume in sucrose containing media on establishment of embryogenic suspension cultures in SF and BCB from cultures of female gametophytes and mature zygotic embryos

Table 47. Effect of culture volume in sucrose containing media on establishment of suspension cultures in SF and BCB from cultures of secondary needles and apical dome sections

Table 48. Effect of growth regulators on maintenance and multiplication of embryogenic suspension cultures from female gametophytes

Table 49. Effect of growth regulators on maintenance and multiplication of embryogenic suspension cultures from female gametophytes

Table 50. Effect of growth regulators on maintenance and multiplication of embryogenic suspension cultures from mature zygotic embryos

contd...
Table 51. Effect of growth regulators on maintenance and multiplication of embryogenic suspension cultures from mature zygotic embryos

Table 52. Effect of growth regulators on maintenance and multiplication of suspension cultures from secondary needles

Table 53. Effect of growth regulators on maintenance and multiplication of suspension cultures from secondary needles

Table 54. Effect of growth regulators in ½DCR medium on maintenance and multiplication of suspension cultures from apical dome sections

Table 55. Effect of growth regulators in ½DCR medium on maintenance and multiplication of suspension cultures from apical dome sections

Table 56. Effect of ABA, sucrose and mannitol on development and maturation of somatic embryos on semisolid medium obtained from female gametophytes and zygotic embryos (*filter paper base method*)

Table 57. Effect of ABA and sucrose on development and maturation of somatic embryos on semisolid medium obtained from female gametophytes and zygotic embryos (*filter paper base method*)

contd...
Table 58. Effect of ABA, sucrose and mannitol on development and maturation of somatic embryos in liquid medium obtained from female gametophytes and zygotic embryos (submerge culture method)

Table 59. Effect of ABA and sucrose on development and maturation of somatic embryos in liquid medium obtained from female gametophytes and zygotic embryos (submerge culture method)

Table 60. Effect of ABA, sucrose and mannitol on development and maturation of somatic embryos on semisolid medium obtained from female gametophytes and zygotic embryos (direct culture method)

Table 61. Effect of ABA and sucrose on development and maturation of somatic embryos on semisolid medium obtained from female gametophytes and zygotic embryos (direct culture method)

Table 62. Effect of ABA and sucrose on development and maturation of somatic embryos obtained from cultures of female gametophytes and zygotic embryos in BCB

Table 63. Effect of ABA, sucrose and mannitol on development and maturation of somatic embryos obtained from cultures of female gametophytes and zygotic embryos in BCB

contd…
Table 64. Growth characteristics of SF suspension cultures obtained from female gametophytes in \( \frac{1}{2} \) Litvay's medium

Table 65. Growth characteristics of shake-flask suspension cultures obtained from mature zygotic embryos in mMS medium

Table 66. Effect of light and photoperiod on germination of somatic embryos from female gametophyte and zygotic embryo

Table 67. Effect of humidity on hardening of emblings obtained from cultures of female gametophytes and zygotic embryos
