Chapter 1  1-13
General Introduction
1.1 Insectivorous plants  1
1.2 *Nepenthes khasiana*, an endemic insectivorous plant of Meghalaya, India  4
   1.2.1. Distribution  4
   1.2.2. Habit  6
   1.2.3. Economic importance  8
   1.2.4. Status in its natural habitat  9
   1.2.5. Conservation strategies  9
1.3 Plant tissue culture techniques and assessment of genetic stability in regenerated plants  10
1.4 Objectives  13

Chapter 2  14-33
Review of literature
2.1 Micropropagation and genetic variations  14
2.2 Somaclonal variations at the chromosomal level  20
2.3 Somaclonal variations and the repetitive sequences of heterochromatin  23
2.4 Somaclonal variations and PCR-based molecular markers  24

Chapter 3  34-56
*In vitro* establishment of three consecutive regenerations of *Nepenthes khasiana* plantlets using nodal segments
3.1 Introduction  34
3.2 Materials and methods  35
   3.2.1. Plant material, culture media and growth conditions for multiple shoot induction  35
   3.2.2. Rooting and acclimatization  36
   3.2.3. Establishment of the second and the third regenerations  37
   3.2.4. Statistical analysis  37
3.3 Results  38
   3.3.1. Standardization of surface sterilization  38
   3.3.2. Initiation of cultures and multiple shoot induction  38
Chapter 4
Assessment of genetic fidelity through cytological analysis in regenerants of *Nepenthes khasiana*

4.1 Introduction 57
4.2 Materials and methods 60
   4.2.1. Plant material and regeneration 60
   4.2.2. Cytological preparations for mitotic complements 60
   4.2.4. Microphotography 60
   4.2.5. Magnification 61
4.3 Results 61
4.4 Discussion 69

Chapter 5
Assessment of genetic fidelity in regenerants of *Nepenthes khasiana* based on differential fluorochrome binding pattern

5.1 Introduction 78
5.2 Materials and methods 81
   5.2.1. Cytological preparation for CMA and DAPI binding sites 81
   5.2.2. Microphotography 82
   5.2.3. Magnification 83
5.3 Results 83
5.4 Discussion 89

Chapter 6
Assessment of genetic fidelity in regenerants of *Nepenthes khasiana* using DNA-based markers

6.1 Introduction 93
6.2 Materials and Methods 95
   6.2.1. Genomic DNA extraction 95
   6.2.2. Quality check of genomic DNA 95
   6.2.3. Quantification of DNA 96
   6.2.4. Single primer amplification reaction (SPAR) methods 97
   6.2.5. PCR optimization, primer survey and final 97
amplification

6.2.6. SPAR and gel electrophoresis 98
6.2.7. Scoring and data analyses 99

6.3 Results 99
6.3.1. Quality check and quantification of isolated DNA 99
6.3.2. Standardization of RAPD, ISSR and DAMD protocols and primer screening 100
6.3.3. SPAR analysis and profile polymorphism 100
   6.3.3.1. SPAR analysis across the micropropagated plantlets of the three regenerations collectively 100
   6.3.3.2. SPAR analysis for the plantlets of the first regeneration 116
   6.3.3.3. SPAR analysis for the plantlets of the second regeneration 122
   6.3.3.4. SPAR analysis for the plantlets of the third regeneration 126

6.4 Discussion 132

Summary 139-144
