Acknowledgments

I am indebted to my supervisor Prof. Sanjay Chaudhary for accepting me as a doctoral student and allowing me to join his research group. By means of courses and research projects, he introduced me to advance topics like SOA, Grid Computing and Semantic Web that laid a strong technical foundation of my research work. His unique motivating capability to be on the front line of the research kept me aware of the advancements. He has always provided me with the required resources and guidance, without which this research could not have been possible. He has given me opportunity to work as research assistant in a sponsored research project, and provided financial support. His leadership skills and result-oriented nature have created deep impression in my mind, and will continue to inspire me for the rest of the life.

I thank my co-supervisor Prof. Anutosh Maitra for providing excellent guidance throughout the tenure. Taking my ambitious research interest “reducing chaos during disasters”, he meticulously carved out research plan and lead me toward formulation of precise and manageable research questions. He allowed me to take up this research area and gently navigated through various phases of research that enabled me to complete research in due time. I have been provided with funding and other support required in academic and research activities. He has always supported me in various academic and administrative complexities and other difficult times that are part of student life. I really appreciate him, for showing immense patience in listening to ideas and making complex things simpler. He has always amazed me by grasping my initial thoughts, predicting and showing me all the possible roadblocks or prospects that may show up. I really thank him for all the guidance, support and help that enabled me to complete the work.

I am grateful to Prof. V.P Sinha for his continuous encouragement and mentoring throughout the years. In earlier years of the program, his insightful directions lead me to explore the work of Barwise and others that laid theoretical foundation for the thesis. Prof. Samaresh Chatterji with his capacity as the Dean of academic matters, provided me numerous training, collaboration and research opportunities to enhance my knowledge and skills. I am grateful to him for all the generous help and support.

I thank Prof. Asim Banerjee for the ideas, insights and thought provoking questions regarding my research topic. Several teaching assistant opportunities with him enabled me to learn software engineering and project management principles that are incorporated in this research work. I am thankful to all the DA-IICT faculty members who have guided, mentored or supported me by acting on various academic committees.
My special thanks to Dr. Amit Anil Nanavati (IBM India Research Lab) for providing valuable feedback, suggestions and appreciation during his visits to the campus.

I sincerely thank the external reviewers of my thesis. In spite of busy professional schedule, they completed the review work in time and provided comprehensive recommendations improving the readability of the thesis.

I acknowledge the DA-IICT Resource Centre for ensuring best library, information and reference services that have played important role in my work.

I owe a special thanks to all the PhD students at DA-IICT. Especially, Zakir Laliwala has provided great companionship during the ups and downs of the student life. I thank him for introducing me excellent tools like Mind Maps and Year Planners that have helped me organize my work. Sunil Jardosh, Ratnik Gandhi, Pratik Shah, Guneshwar Anand, Divyang Rawal, Nilesh Bankar and many other current and past PhD students of DA-IICT have made the stay a memorable experience.

I sincerely acknowledge the help from Mr Arif Vohra (Senior Executive, GSDMA) for his guidance by means of resources and discussions on various disaster management related aspects. His kind and continuous help have revealed many important aspects of the application domain.

During my tenure, I have been fortunate to have interactions with many batches of M. Tech, B. Tech and M. Sc. courses, especially with the fellow students in DS Lab. I enjoyed communicating with them all and value their unique contributions.

The staff members at DA-IICT have provided lot of help and support. Lab assistants, faculty assistants, Help Desk and administration staff have always helped me with various issues. I acknowledge their kind cooperation.

At last, I thank my family that has been my driving force. With unconditional love, I am always ensured emotional, financial and any other kind support that I needed in my pursuits. I understand and acknowledge every one for all the compromises and sacrifices done to ease my efforts. I cannot thank my family enough for providing me a strong base on which I could stand still and was able to complete this work.
