ACKNOWLEDGEMENTS

I was fortunate to have Prof. Ramesh Sharma as my Ph.D supervisor. His outstanding guidance, easy accessibility and precise suggestions have been largely responsible for the completion of this thesis. Thank you sir for your excellent contributions towards preparation of manuscript for publications.

I am also indebted to Prof. A.N.Rai, Prof. R.N.Sharan, Dr. A.Alam, Dr. D.Sylem and Dr. A.K. Singh for their productive assistance and cooperation during the entire period of work.

Special thanks to my labmate H.Lyngdoh for all his help and cooperation during the course of my work. Thanks also to Debipreeta and Indrani for their cooperation. Earlier researchers from this laboratory, Dr. M.A.Borbhuiya and Dr. L.S.Singh also deserve thanks.

I wish to thank all the research scholars of this department for their help and advice. Thanks also to I.Longkumer for his valuable suggestions every now and then.

I express my appreciation towards all the non-teaching staff of this department for their assistance.

I express gratitude towards my Parents and Harleen (my wife), who were most understanding of the long hours of absence from home that were required to produce this thesis. Their contributions were unfathomable.

Finally, I am grateful to the department of Biochemistry, North Eastern Hill University for providing research facilities. Initial research fellowship from CSIR, New Delhi, is also gratefully acknowledged. My appreciation to St. Edmund's College, Shillong, where I teach, for allowing me to carry out the research work to its completion.

Date: 16.8.2001
