TO MY PARENTS AND THOSE WHO BELIEVE IN SCIENCE
ACKNOWLEDGEMENT

At the outset, I would like to express my sincere thanks and gratitude to my PhD supervisor Dr. Sudipta Das, (I/c, Biotechnology, TRA, Tocklai) for allowing me to be part of his research team, helping me conceive my research topic, guiding me through the experiments and providing me with all the required infrastructure. It is his association which has taught me the virtues of critical thinking and scientific reasoning of events around me, with far reaching implications on my perspective towards science and life.

I would also like to submit my humble gratitude to my co-supervisor and guide Prof. Dr. M.C. Kalita (Department of Biotechnology, Gauhati University) who has given me the opportunity to pursue my PhD work with Gauhati University. It is only due to his untiring help, enterprising attitude and co-operation which has allowed me to continue my research work during troubled times. Moreover, I would also like to thank Dr. P.J. Handique, HOD, Biotechnology, Gauhati University, for encouraging me and allowing me to pursue my PhD with renewed vigour. I acknowledge the encouragement and co-operation rendered to me by Dr. Mridul Hazarika, Director, TRA during the entire tenure of my endeavour.

I am also thankful to Dr. Biswajit Bera, then in charge, Department of Biotechnology, Tocklai Experimental Station, TRA, Jorhat (presently, Director of Research, Tea Board, Govt. of India) for introducing me to the world of tea research in Tocklai, in 2006. My sincere thanks to Dr. Priyabrata Sen, Associate professor, Assam agricultural University and Dr. Tanoy Bandyopadhyay, Scientist, Biotechnology, TRA for providing me with much needed literature and suggestions on my work respectively.

I am also indebted to Prof. Dr. K. Veluthambi, Centre for Plant Molecular Biology (SBT), Madurai Kamraj University, Tamil Nadu, for introducing me to the world of plant molecular biology and genetic engineering - their theory and practice, which has immensely helped me in addressing the technical challenges during my work. I am especially thankful to Meena and Balamani madams for their excellent guidance and insights in planning and executing experiments. I would also like to thank Mrs. Sangeeta Tathai, Lab India, Gurgaon and Mr. Animesh Ghosh, ABI, for their kind help and guidance towards DNA sequencing methods and protocols.

My heartfelt thanks to Mr. Tankeswar Bora (Research Scholar, plant protection division, TRA) and Mr. Ranjit Bordoloi (PI Division, TRA) for generously helping me in setting up experiments and providing useful inputs during sample collection. I am also grateful to my labmate Ms. Bornali Gohain, for helping me with gene expression data generation and analysis as well as thesis writing. My honest appreciation goes to my lab mates Raju Bharalee, Sangeeta Borchetia, Sushmita Gupta, Priyadarshini Bhorali, H. Ranjit Singh, Prasenjit Bhagawati, Parveen Ahmed, Neelakshi
Bhattacharyya, Saurabh Kumar Das, Niraj Agarwal, Setu Chakraborty, Chiranjana Borah, Afruza Zaman, Madhurjya Gogoi and Shaheen Shah for their continued support, co-operation and understanding. I would also like to thank the suppliers, especially Jain ji and Rajib da for their kind effort in supplying reagents in time. Many thanks to Kasturi for the needed illustrations.

Moreover, I would also like to acknowledge the support provided by Department of Biotechnology, Govt. of India, for generously funding the project “Generation and Analysis of EST from Camellia species” (Project reference No. BT/PR6753/PBD/16/614/2005), which was instrumental in providing me opportunities for the present study.

On a personal front, I am indebted to my parents – Baba and Ma for their love, faith and unrelenting support throughout the period of my research, without which it was literally impossible to continue with my efforts. I am also grateful to my sisters Rupu and Munna and friends Kundan and Dosti for their inspiration and love which has enabled me to endure through thick and thin.

Tirthankar Bandyopadhyay
