LIST OF FIGURES

No. | Particulars
--- | ---
1. | *Petunia hybridra* Vilm.: Naturally infected plant showing yellow mosaic symptoms on leaves and stunting of plant.
2 (a) | *P. hybridra* Vilm.: Healthy plant with flowers.
(b) | *P. hybridra* Vilm.: Infected plant with mosaic, variegation in colour of flower, and deformed buds.
4. (a) | *Beta vulgaris saccharifera* L.: Healthy leaf.
(b) | Inoculated leaves showing necrotic local lesions.
5 (a) | *Chenopodium album* L.: Healthy leaf.
(b) | Inoculated leaves showing yellow coloured lesions later changed to dark brown coloured necrotic areas.
6. | *C. amaranticolor* Coste & Ryne.: Inoculated leaf showing yellow coloured areas encircling necrotic pin head type lesions.
7. (a) | *C. murale* L.: Healthy leaf.
(b) | Inoculated leaf showing necrotic local lesions.
8. (a) | *C. quinoa* L.: Healthy leaf.
(b) | Inoculated leaf showing necrotic local lesions.
10. (a) | *Vigna mungo* L.: Healthy leaf.
(b) | Inoculated leaf showing discrete local lesions.
12. (i) (a) | *Datura metel* L.: Healthy leaf.
(b) | Infected leaf showing mosaic, and puckering of leaf.
(ii) | Infected plant showing mosaic and fern-like leaves.
(iii) |

15. (a) *N. occidentalis* Wheeler: Healthy leaf.
    (b) Infected leaves showing mosaic.

16. *N. plumbaginifolia* Viv.: Infected plant showing mosaic and necrosis of the plant.

17. (a) *N. rustica* L.: Healthy plant.
    (b) Infected plant with mosaic, deformed leaves, and stunting of stem.

20. *N. tabacum* L. cv. CTRI Special: Infected plant with mosaic, deformed leaves, and necrosis along the veins.

22. *N. tabacum* L. cv. Harrison's Special: Infected plant showing mosaic, deformed leaves, necrosis of leaves, and stunted growth.

24. *N. tabacum* L. cv. samsun: Infected plant showing mosaic, deformed leaves, and apical necrosis in older leaves.

25. (a) *Physalis peruviana* L.: Healthy plant.
    (b) Infected plant with mosaic and distortion of leaves.

27. Average number of local lesions/leaf of different local lesion hosts of PYMV.

28. Concentration of PYMV in different hosts at different periods after mechanical inoculation.

29. Concentration of PYMV in different parts of *N. tabacum* cv. Jayasri plants.

(iv)
30. Effect of various buffers at different pH values on the infectivity of PYMV.
31. Effect of different molarities of phosphate buffer pH 7.0 on the infectivity of PYMV.
32. Effect of some organic solvents on the infectivity of PYMV.
33. Effect of PEG and NaCl on the precipitation of PYMV.
34. Flow diagram for the purification of PYMV.
35. Rate zonal density gradient centrifugation of PYMV in sucrose gradient.
36. UV-absorption spectrum of purified preparation of PYMV.
37. (a) SDS-PAGE electrophoresis of virus coat protein.
   (b) Estimation of molecular weight of coat protein subunit of PYMV from calibration curve obtained by (i) distance migration, and (ii) Rf values by SDS - PAGE electrophoresis.
38. Estimation of RNA% of PYMV using quadratic regression line.
39. Estimation of extinction coefficient \(E^0\) of PYMV using linear regression line.
40. Determination of density in CsCl solution of PYMV using quadratic regression line.
41. Electron micrograph of negatively stained preparation from clarified virus concentrate.
42. Electron micrograph of ultrathin section of infected \textit{N. tabacum} cv. Jayasri leaves showing scrolls and lamellar aggregates.
43. Electron micrograph of ultrathin section of infected \textit{N. tabacum} cv. Jayasri leaves showing pin wheels and lamellar aggregates.
44. Electron micrograph of ultrathin section of infected \textit{N. tabacum} cv. Jayasri leaves showing pin wheels, scrolls and lamellar aggregates.
45. Double diffusion test in agar with PYMV and its antiserum.
46. Double diffusion test in agar with PYMV antiserum and antisera of different viruses.
47. Electron micrograph showing PYMV particles trapped and decorated with antiserum to papaya ringspot virus.
48. Electron micrograph showing PYMV particles trapped and decorated with antiserum to potato virus Y.
