CONTENTS

1. INTRODUCTION 1-7

2. REVIEW OF LITERATURE 8-39
   ➢ Genetic variation and molecular markers
     ✓ Allozyme markers
     ✓ Mitochondrial DNA markers
     ✓ Random amplified polymorphic DNA (RAPD) markers
     ✓ Single nucleotide polymorphism (SNP)
     ✓ Microsatellite markers

   ➢ Use of molecular markers
     ✓ For species identification
     ✓ For identification of microsatellite markers through cross-species amplification
     ✓ For genetic variation and population structure study in natural populations
     ✓ Assessment of demographic bottleneck in natural population
     ✓ For comparison of genetic variation between wild and hatchery populations

3. MATERIALS AND METHODS 40-59
   ➢ Collection of samples
     ✓ Fish samples and sites of collection
     ✓ Tissue samples
     ✓ Transportation and storage of tissues
   ➢ Allozymes analyses
     ✓ Methodology
     ✓ Standardization of allozyme electrophoresis
   ➢ Microsatellites analyses
     ✓ Isolation of Genomic DNA
     ✓ Methodology for Amplification of microsatellite loci
     ✓ Standardization of PCR and PAGE conditions
     ✓ Strategy for microsatellite analysis
     ✓ Sequencing of PCR amplified microsatellite markers
     ✓ Genotyping of PCR product
     ✓ Statistical analysis of data of both allozyme and microsatellite markers
4. RESULTS AND DISCUSSION

➢ IDENTIFICATION OF MARKERS 60-83
➢ GENETIC VARIATION STUDIES IN *Labeo dero* 84-123
➢ GENETIC DIFFERENTIATION of *Labeo dero* 124-147

5. IMPLICATION 148-150

6. BIBLIOGRAPHY 151-174

ANNEXURE i -xi
