ACKNOWLEDGEMENTS

In the name of Allah, the most Beneficent, the most Merciful

After all those years, I've got quite a list of people to whom I am very grateful for their help and encouragement while undertaking the work described in this thesis. They are inevitably too numerous to name all individually, but I will at least make an attempt.

The first person I would like to thank is my supervisor, Dr. Rizwan Hasan Khan. During these years I have known him as a sympathetic and principle-centered person. His sage advice, insightful criticisms, and patient encouragement aided the writing of this thesis in innumerable ways. This thesis would not have appeared in its present form without his kind assistance and support. I am also thankful to his wife, for her immeasurable kindness and hospitality.

I am grateful to Prof. M. Saleemuddin, coordinator, Interdisciplinary Biotechnology Unit, AMU, Aligarh for providing necessary facilities and help.

I express my sincere thanks to my teachers Dr. Saad Tayyab, Dr. Assadullah, Dr. M Owais and Dr. Hina Younus for their encouragement and help. I also heartily acknowledge the help and cooperation from Mr. Syed Faisal Maqbool, Mr. Aqtedar Husain, Dr. Parveen Salahuddin, Mr. Lal Mohd. Khan, Mr. Amir Ali, Mr. Mohd. Nasir, Mr. Ramesh Chandra Paal, Mr Chandra Paal, Mr. Islam Khan, Mr. Aslam, Mr. Mashkoor, Mr. Rajendra and Mr. Karamveer.

It is more than a word of thanks that I owe to my seniors Dr. Soghra Khatun Haq and Dr. Aabgeena Naeem. I admire them and thank them for spurring me on when I most needed it. I sincerely thank my fabulous colleagues Tashfeen, Priyankar, Ejaz, Ankita, Sadaf for their cooperation and help through both good times and bad. Special thanks goes to Basir for his never-ending support and helpfulness with never a hint of annoyance. I have had the opportunity to spend great memorable moments with all of them.
It was a great experience and a lot of fun to work so closely with Hafeeza, Iram, Rubab, Barira, Akram, Atif, and Shehpar.

I wish to extend my sincere gratitude to my friend Dr. N.A. Arivarasu and my senior Dr. Kaleem Mahboob from Department of Biochemistry, AMU, for being there for me whenever needed.

A special thanks goes to my friend Kahkashan, whom I have known for more than twenty years now and who showed to be a kind, helpful and trustful friend.

I would like to express my thanks from the depths of my heart to my husband, who offered moral support, encouragement and patient companionship during my study.

The chain of my gratitude would be definitely incomplete if I would forget to thank my parents and elder brother for creating an environment in which following this path seemed so natural. They always supported and encouraged me to do my best in all matters of life. Their faith, patience and teaching always inspired me to walk upright in my life. They bore me, raised me, supported me, taught me, and loved me. Without them my world would have been an empty place. To them I dedicate this thesis.

The financial support in the form of senior research fellowship by CSIR is greatly acknowledged.
