ACKNOWLEDGEMENTS

I wish that there are words which can express my sense of gratitude towards my esteemed teacher, Professor Shri Prakash, Department of Economics, North-Eastern Hill University, Shillong, who has brought my dream into reality. I feel that I have been so lucky to do my research work under the guidance of a competent and hard-working teacher like him. In fact, it is his iron will, timely encouragement and never-fading enthusiasm which have always driven me towards the goal that I strived to attain.

I also want to give many thanks to Dr. K. Bez, Head of the Department of Economics, North-Eastern Hill University, Shillong, who has opened my eyes towards mathematical economics; and always ready to help me with friendly attitude.

The name which should never be left unmentioned is that of Dr. T. Lawma, Lecturer, Department of Economics, NEHU, Shillong, who had helped me in every possible manner. His words of encouragement and many other helps he had rendered to me have made invaluable contribution for the completion of my work.

I owe many thanks to Dr. Lalruanga, Principal and Dr. Lalchungnunga, Vice-Principal of Aizawl College, Aizawl, for their mutual understanding and their true academic interests which had enabled me to find time for my study.

Lastly, I am very much indebted to Mr. K. Sangkima, Lecturer, Department of Economics, Aizawl College, Aizawl, who offered himself to take all my classes so that I would be able to work on my Dissertation. His unselfish deeds has given me an opportunity to complete this Dissertation.

Shillong, the 17th December, 1988

(Lalrinthanga)
