List of Figures & graphs

List of Figures

Introduction

**Figure 1:** Sepsis represents SIRS with infection 2

**Figure 2:** Generation of reactive oxygen species and the defence mechanisms against damage by active oxygen 6

**Figure 3:** The possible role of reactive oxygen species (ROS) in modulating the effects of inflammation on vascular structure and function. 7

**Figure 4** The scavengers' superoxide dismutase, catalase, and glutathione are responsible for inactivation of reactive oxygen species (ROS) and thus provide a defence against lipid peroxidation, protein damage, and DNA damage due to ROS. 8

List of graphs:

Chapter - I

1. Distribution of males and females in normal control and sepsis groups. 55
2. Distribution of males and females in normal control and sepsis groups. 56
3. Distribution of patients in different age groups. 58
4. Mean (± SD) age of the patients in normal control and sepsis groups. 59
5. Distribution of patients in different weight range 61
6. Mean (± SD) weight of the patients in normal control and sepsis groups 62

Chapter II

1. The level of haemoglobin level in normal control and sepsis patients. 67
2. WBC counts in normal control and sepsis patients. 68
3. Platelet counts in normal control and sepsis patients. 68
4. The serum total SH groups in normal control and sepsis patients. 70
5. The level of serum LPO in normal control and sepsis patients. 70
6. The level of serum SOD, catalase and GPX levels in normal control and sepsis patients. 71
7. The level of serum GR and G6PDH in normal control and sepsis patients. 72
8. The level of serum GST in normal control and sepsis patients. 73
9. The level of serum LDH in normal control and sepsis patients. 73
10. The level of C-reactive protein level in normal control and sepsis patients. 74
List of figures & graphs

11. The percentage change in haematological markers in sepsis patients from normal control. 76
12. The percentage change in serum biochemical markers in sepsis patients from normal control. 77
13. The percentage change in serum level of proposed biochemical markers in sepsis patients from normal control. 78

Chapter III

1. Correlation between APACHE II score and Hb gm% in sepsis patients. 98
2. Correlation between APACHE II score and WBC count in sepsis patients. 98
3. Correlation between APACHE II score and platelet counts in sepsis patients. 99
4. Correlation between APACHE II score and CRP level in sepsis patients. 99
5. Correlation between APACHE II score and total SH group in sepsis patients. 100
6. Correlation between APACHE II score and LPO level in sepsis patients. 100
7. Correlation between APACHE II score and SOD level in sepsis patients. 101
8. Correlation between APACHE II score and catalase level in sepsis patients. 101
9. Correlation between APACHE II score and GPX level in sepsis patients. 102
10. Correlation between APACHE II score and GR level in sepsis patients. 102
11. Correlation between APACHE II score and GST level in sepsis patients. 103
12. Correlation between APACHE II score and G6PDH level in sepsis patients. 103
13. Correlation between APACHE II score and LDH level in sepsis patients. 103
List of figures & graphs

14. Correlation between APACHE II score < 10 and Hb gm% in sepsis patients. 105
15. Correlation between APACHE II score < 10 and LPO level in sepsis patients. 105

Chapter IV:

1. The level of Hb gm% on day 1 and day 4 in different groups and the difference between them on day 4. 115
2. The WBC count on day 1 and day 4 in different groups and the difference between them on day 4. 117
3. The platelet counts on day 1 and day 4 in different groups and the difference between them on day 4. 119
4. The CRP level on day 1 and day 4 in different groups and the difference between them on day 4. 121
5. The serum total SH group on day 1 and day 4 in different groups and the difference between them on day 4. 123
6. The serum LPO level on day 1 and day 4 in different groups and the difference between them on day 4. 125
7. The serum SOD enzyme level on day 1 and day 4 in different groups and the difference between them on day 4. 127
8. The serum catalase enzyme level on day 1 and day 4 in different groups and the difference between them on day 4. 129
9. The serum GPX enzyme level on day 1 and day 4 in different groups and the difference between them on day 4. 131
10. The serum GR enzyme level on day 1 and day 4 in different groups and the difference between them on day 4. 133
11. The serum GST enzyme level on day 1 and day 4 in different groups and the difference between them on day 4. 135
12. The serum G6PDH enzyme level on day 1 and day 4 in different groups and the difference between them on day 4. 137
13. The serum LDH enzyme level on day 1 and day 4 in different groups and the difference between them on day 4. 139
