CONTENTS

Chapter I. INTRODUCTION ................................................................. 1

I. Title and Meaning of the terms ................................................. 1
   A. Intelligence ........................................................................... 2
      (i) Bird's-eye view of biological-operational- psychological
          picture ........................................................................... 3
      (ii) Factorial picture .............................................................. 9
      (iii) Intelligence during adolescence ...................................... 16
   B. Intellectual stimulation during adolescence ......................... 21
      (i) Age ................................................................................ 23
      (ii) Sex .............................................................................. 25
      (iii) Occupational and geographical differences ..................... 26

II. Previous Researches: Methods and Tests used ......................... 27
   A. Methods ........................................................................... 27
      (i) Longitudinal (i.e. Testing-re-testing technique) .......... 28
      (ii) Cross-sectional studies .................................................. 34
   B. Tests Used ........................................................................ 41

III. Influence (or effect) of intellectual stimulation on intelligence
during adolescence ................................................................. 44

Chapter II. GENERAL PLAN OF THE RESEARCH ................................. 48
   A. Design of the Investigation ................................................... 48
   B. Sampling ............................................................................ 54
      1. Choice of the schools in terms of the degree of intellec-  
         tual stimulation ............................................................ 54
2. Choice of the subjects .............................................. 56
   (i) Age ...................................................................... 58
   (ii) Sex ........................................................................ 61
   (iii) Socio-economic (including religious-regional) and other variables .............................................. 62
   C. Testing Sessions .................................................... 65
   D. Normalisation of raw scores .................................... 66

Chapter III. DESCRIPTION OF EXAMINATION MARKS AND ABILITY TESTS .... 70

Section 1. Examination marks as a measure of educational attainment. 70
  1.1. Examination marks ................................................ 70
       (a) Source and description ........................................ 70
       (b) Normalisation of the examination marks .................. 76
  1.2. Examination scores combined .................................. 83

Section 2. Ability Tests as a measure of intelligence ................. 88
  2.1. Ray-Chaudhury-Ojha's Verbal Intelligence Test ............. 89
       (a) Source and description ........................................ 89
       (b) Scoring ............................................................. 92
       (c) Normalising the raw scores .................................. 93
  2.2. Vernon's Non-verbal (g) Test .................................. 103
       (a) Source and description ........................................ 103
       (b) Scoring ............................................................. 103
       (c) Normalising the raw scores .................................. 104
Section 2.3 Raven's (1938) Progressive Matrices .......................... 105
(a) Source and description ........................................ 105
(b) Scoring .................................................................. 109
(c) Normalising the raw scores ....................................... 109
2.4 Vernon's Block Design .............................................. 115
(a) Source and description ............................................ 115
(b) Scoring .................................................................. 116
(c) Normalising the raw scores ....................................... 116
2.5 Vernon's Pattern Drawing .......................................... 117
(a) Source and description ............................................ 117
(b) Scoring .................................................................. 118
(c) Normalising the raw scores ....................................... 118
2.6 Vernon's Graded Arithmetic-Mathematics Test ............... 119
(a) Source and description ............................................ 119
(b) Scoring .................................................................. 121
(c) Normalising the raw scores ....................................... 121
Chapter IV STATISTICAL ANALYSIS OF THE DATA .................. 123
Section 1 Reliability and Validity: Ability Tests ..................... 123
1.1 Reliability ............................................................ 123
(1) Split-half reliability ................................................. 124
(ii) Kuder-Richardson estimates of reliability ................. 125
(iii) Significance of the reliability figures ....................... 127
1.2 Validity ............................................................... 129
1.3 Study of the overlapping between the six ability tests ....... 133
Section 2. Factorisation of six ability tests ........................................ 137
2a. Centroid Method ........................................................................ 137
2a(i) Extraction of the factors ......................................................... 137
2a(ii) Total variances of the tests ..................................................... 142
2a(iii) Rotation of the orthogonal reference axes ......................... 142
2b. Spearman's General Factor Method .......................................... 145

Section 3. Statistical Analysis of Intellectual stimulation .......... 146
3a. Study of the consistency of the second criterion of
    intellectual stimulation as a factor with respect to
    the internal criterion, etc. Need to factorise
    sets of examination marks ................................................... 149
3b. Study of the school subjects by inter-correlating the
    sets of examination marks etc. .............................................
3c(i) Factorial Analysis of school subjects (including V.I.T.)
    and Psychological tests ....................................................... 154
3c(ii) Factorial Analysis and interpretation ................................... 156
3c(iii) Study of the possibilities of ascertaining the
        educational (or scholastic) attainment factors as
        constituent of intellectual stimulation ............................. 162
3d(i) Study of the consistency of internal criterion No. 1
      (with the factor patterns) in logically classifying
      the stimulating and less (or non-) stimulating groups ... 161
3d(ii) Conclusion ........................................................................ 164
3e. Final step in assigning groups to different degrees of
    intellectual stimulation ......................................................... 166

Chapter V. INFLUENCE OF INTELLECTUAL STIMULATION ON INTELLIGENCE ... 173
Section 1. Statistical Methods followed ........................................ 173
Section 2. Interpretation of the results obtained by the various
            differential techniques used in the previous section .... 161
Section 2.

Part I. Verification of external criterion .......................... 182

Part II. Verification of internal criterion No. 1 .......... 184

Part III. Verification of the internal criterion No. 2 ....... 195

Section 3. Summary of the findings ................................. 198

Chapter VI. SUMMARY OF MAIN CONCLUSIONS ..................... 207

---

LIST OF TABLES

Table I. Vernon’s factor solution of Stephenson’s results ....... 13

Table II. Showing five years’ progress report of the boys in three different schools ................................. 55

Table III A. Showing the selection of subjects under different age groups without treatment—arrangements ......................... 60

B. Showing the selection of subjects under different age groups without treatment arrangements ............................. 61

Table IV. Showing the plan of the administration of the tests .... 65

Table V. Normalisation of the raw scores of Vernon’s Non-Verbal 'g' test ......................................................... 68

Table VI. Limits of P.R. corresponding to respective normal scores. 69

Table VII. Showing the combinations of optional subjects offered by the students ............................................. 75

Table VIII A. Showing the distribution and normalised scores of examination marks in English ............................. 77

B. Showing the distribution and normalised scores of examination marks in Mathematics ............................... 78

C. Showing the distribution and normalised scores of examination marks in Hindi ............................................. 79
