ACKNOWLEDGEMENTS

I express my gratefulness cordially and relishingly to my supervisor Prof. K.S. Siddiqi, Department of Chemistry, Aligarh Muslim University, Aligarh (India) for his invaluable assiduous guidance. His persistent diligence and perseverance with prompt response was courteous and sympathetic towards me throughout the tenure of this research programme.

Despite the impossibility of giving credit to everyone who has been of help, I would like to single out certain people who have been especially instrumental, directly or indirectly, in the completion of this work. The professional expertise and perspicuity of Prof. S.A.A. Zaidi, Department of Chemistry, A.M.U., Aligarh, laced with his keen interest in research, made it a remarkable and unforgettable achievement. My sincere gratitude and thanks go to Prof. J. Casabo, Departament de Quimica, Universitat Autonoma de Barcelona, Spain, and Prof. F. Teixidor, Institute de Ciencia de Materials C.S.I.C. Barcelona, Spain, for their benevolent help in making the quantitative and qualitative analyses of the compounds possible.

I have enjoyed working with and learning from Dr. S. Tabassum, Department of Chemistry, A.M.U., Aligarh, who cajoled appropriately to get this project reach to the final shape. I could also join the S.R.F. from C.S.I.R., New Delhi, under his guidance.

I do acknowledge the Council for Scientific and Industrial Research (CSIR), New Delhi, for the award of Senior Research Fellowship (SRF) for I could make "both ends meet".

I am privileged to thank Prof. Noorul Islam, Chairman, Department of Chemistry, A.M.U., Aligarh, for providing necessary laboratory facilities. His unparalleled teaching at my post-graduate level remained as a perennial memory.
It has been my very good fortune to have had contact with exceptional teachers, when I was an under-graduate student, whose dynamic teaching abilities enabled me to perceive the basics of the subject.

I certainly appreciate the help and cooperation extended by my stimulating colleagues in this endeavour, I hope none will feel slighted by the physical impossibility of listing every name. But, I don't hesitate to proffer my heartfelt gratitude to Fathi who, besides being a jubilant colleague, proved to be "the best friend and severest critic". I am indebted to all other friends and intimates for providing support and encouragement off the lab, especially Qayoom deserves a special mention.

My beloved divine parents, besides my upbringing, have tolerated and contributed much through their innumerable sacrifices over the years including love and support morally as well as materially. Their inspirations throughout taught me the lessons of large hearted tolerance, sincerity and faithful devotion to the work. My affectionate sister and brothers, the friends provided by nature, excelled my performance in every drive. To all of these, go my deepest gratitude and thanks.

Finally, I am thankful to Mr. Kafeel A. Khan for his neat and clean typing of this thesis with great efficiency and accuracy.

After all it is the graciousness of almighty God, "He giveth man the knowledge that he knewth not".

( SHAKEEL AHMAD SHAH )
