ACKNOWLEDGEMENTS

I dedicate this little piece of research work to my revered teacher and previous supervisor, late Professor A. Ansari, formerly Head of the Department of Psychology, Aligarh Muslim University, Aligarh, and to the memories of my husband late Professor S.D. Singh, formerly Head of the Department of Psychology, Institute of Advanced Studies, Meerut University, Meerut. My husband gave me this problem, devised apparatuses for the measurement of both visual and kinesthetic figural after-effects, and gave all cooperation and inspiration to work.

I am highly grateful to and proud of having worked with my present supervisor, Dr. B.S. Gupta, Reader, Department of Psychology, Institute of Advanced Studies, Meerut University, Meerut. It is because of his learned and highly valuable advices that I could complete my work, otherwise it would have not been completed after the untimely demise of Professor Ansari about two years back. I am equally grateful to my respected teacher and co-supervisor Professor J.A. Qadri, Head of the Department of Psychology, Aligarh Muslim University, Aligarh for his able guidance.
My heartfelt thanks are also due to Dr. V.P. Gupta of Patiala who obliged me by arranging subjects for my work. I am also highly thankful to students who provided data for this study.

I am also thankful to all those who helped me in any way till I completed my work.

I must also thank Mr. V.K. Goel who not only typed the thesis at a short notice but also helped me in other secretarial work.

( VIMAL KUMARI SINGH )
