Chapter-4 Foraging Ecology

Fig. 4.1 Adult male and female BNS foraging together in a shallow watered area.

Fig. 4.2 Adult male BNS feeding on a fish.

Fig. 4.3 Adult male BNS vibrates its bill after gulping a fish in water.

Fig. 4.4 Adult male BNS shakes its body and neck by stretching it out.

Fig. 4.5 Swamp deer standing together with foraging Blacknecked stork in Banketaal of DNP.

Fig. 4.6 Indian shags and the Little cormorants feeding on the same prey species the BNS feeds on in DNP.

Fig. 4.7 Relationship between fish size and handling time of male BNS recorded in 1996.

Fig. 4.8 Percentage of different size class of fish caught by male and female BNS and their handling time in 1996. Sample size are in parenthesis.

Fig. 4.9 Relationship between fish size and handling time of female BNS recorded in 1996.

Fig. 4.10 Percentage of different size class of fish caught by male BNS and their mean handling time in 1997. Sample size are in parenthesis.

Fig. 4.11 Relationship between fish size and handling time of male BNS recorded in 1997.

Fig. 4.12 Percentage of different size class of fish caught by male and their mean handling time in 1997. Sample size are in parenthesis.

Fig. 4.13 Relationship between fish size and handling time of female BNS recorded in 1997.

Fig. 4.14 Percentage of different size class of fish caught by female BNS and their mean handling time in 1997. Sample size are in parenthesis.
Chapter-5 Inter- and Intra-specific interactions.

Fig. 5.1 Inter- and Intra-specific interactions of BNS recorded in Dudwa National Park. 120

Fig. 5.2 The Black Ibis, common in wetlands of Dudwa National Park. 122

Fig. 5.3 Adult BNS foraging together with a solitary Grey Heron. 122

Fig. 5.4 Adult male BNS showing threat display by stretching its neck before chasing the intruders. 125

Fig. 5.5 Openbill storks being chased by a male Blacknecked stork. 125

Fig. 5.6 Percent number of waders interacted with BNS in Dudwa National Park. 127

Fig. 5.7 Adult male Blacknecked stork. 130

Fig. 5.8 Adult female Blacknecked stork. 130

Fig. 5.9 Percent number of waders interacted with BNS in Dudwa National Park. 135

Fig. 5.10 Percent number of waders interacted with BNS in Dudwa National park. 136

xxx
Fig. 5.11 Percent number of waders interacted with BNS in Dudwa National Park.

Fig. 5.12 Distance between BNS and intruders and the chases distance (in meteres) recorded in 1995.

Fig. 5.13 Distance between BNS and the chase distance (in meters) recorded in 1996.

Fig. 5.14 Distance between BNS and intruders and chases distance (in meters) recorded in 1997.

Chapter-6 Breeding Biology

Fig. 6.1 Adult BNS standing on nest placed at a height of 20 m on a Adeina cordifolola tree.

Fig. 6.2 Juveniles on the nest in the absence of parents.

Fig. 6.3 Map showing the study area and a nest location.

Fig. 6.4 The percentage time spent on different activities by BNS during breeding season in Dudwa National Park.

Fig. 6.5 Percentage time spent by Blacknecked stork on nest during different months in Dudwa national Park.

Fig. 6.6 Percentage time spent by Blacknecked stork on nest during different chick stages in Dudwa National Park.

Fig. 6.7 Percentage time spent on different activities by male and female BNS during breeding season.

Fig. 6.8 Activity budget of male BNS recorded on nest in different months during 1996-97 in Dudwa National Park.

Fig. 6.9 Activity budget of male BNS recorded on nest in different months during 1996-97 in Dudwa National Park.

Fig. 6.10 Activity budget of male BNS recorded on nest in different chick stages in Dudwa National Park.

Fig. 6.11 Activity budget of female BNS recorded ion nest in different chick stages in Dudwa National Park.
Fig. 6.12 Activities of male Blacknecked stork according to time of day during breeding season in Dudwa N.P. 177

Fig. 6.13 Activities of female Blacknecked stork according to time of day during breeding season in Dudwa N.P. 178

Fig. 6.14 Number of feeding trips (per day) made by BNS in different chick stages. 179

Fig. 6.15 Number of re-ingestion being made by BNS immediately after feeding the young ones in different months. 180

Fig. 6.16 Number of reingestion being made by BNS immediately after feeding the young ones in different chick stages. 181

Fig. 6.17 Number of watering trips made by BNS during different months. 185

Fig. 6.18 Number of watering trips by male BNS during different chick stages. 186

Fig. 6.19 Map showing major water bodies from where BNS collected water and soaked grasses. 187

Chapter-7 Conservation and Management

Fig. 7.1 *Sesbania aculiata* weed in Banketaal of Dudwa National Park. 193

Fig. 7.2 Labourers uprooting the *Sesbania aculiata* weed from Banketaal of DNP. 194

Fig. 7.3 Pump set used to pump out water to fill the wetlands during summer months. 196

Fig. 7.4 Hollow wooden logs used for illegal fishing by tribes in Banketaal of DNP. 197

Fig. 7.5 *Heteropnustes fossilis* fish which mostly gets trapped in the wooden logs. 198
