ACKNOWLEDGEMENTS

The author wishes to express his most sincere gratitude and appreciation to Professor Nawab H. Khan for his kind help and valuable guidance during the progress of research, without which this work would never have come to light.

Particular indebtedness is due to late Professor M.A. Basir Khan for permitting the author to work in the Department and for providing necessary facilities. Special thanks are due to Professor S.M. Alam, Head of the Department for the persistent encouragement and invaluable aid throughout the work.

The author is also thankful to all his teachers and friends especially to Dr. M.M. Agarwal for his advice and suggestions whenever needed and to his colleague, Mr. O.P. Raghawanshi for the continuous help and encouragement during this work.

The author is also indebted to Dr. A.B. Borkovec, in charge, Chemosterilant investigations, USDA, Beltsville, Maryland for kindly supplying the chemosterilants, apholate, tepa and metepa.
Thanks are also due to Council of Scientific and Industrial Research, New Delhi for the award of a Junior Research Fellowship which enabled the author to complete his studies at Aligarh.
