I feel greatly obliged to Professors Ashok Bal and Intisar Husain of the departments of Microbiology and Biochemistry for providing the necessary facilities and the essentials needed to carry out this work. I am equally obliged and indebted to my research students particularly, Mr. Shamsuddin Bisati, Mr. Nashat Ullah Siddiqui, Mr. Ali Sher, Dr. Masood Alam and Dr. Sheaib Ahmad Kidwai for helping me in innumerable ways to organise the data in a presentable form. I am very thankful to Professor Mahdi Hasan and Dr. M.B. Khan of the Department of Anatomy for their help in carrying out the histological studies. I would also like to express my gratitude to a large number of scientists around the world, who have helped me in one way or the other to bring this work to completion. They have helped me either by providing research facilities to learn certain technics in their laboratories, or by supplying the research software as gifts. I am equally grateful for the benefit of experience accrued from the outcome of extremely useful and seemingly unending discussions and for receiving reading materials, including the freedom to use their library facilities. In this connection, I would particularly like to mention the names of Dr. Ralph A. Neal, Dr. G.J. Kane and Dr. William Harris of the Wellcome Laboratories of the
Tropical Medicine, Kent, England; Dr. R. Knight of the London School of Tropical Medicine and Dr. W.P. Stamm of the Amoebiasis Research Unit, Royal Free Hospital, London for providing materials and facilities in their laboratories.
I am very thankful to Dr. C.A. Hoare of the Wellcome Museum of Medical Science, London for giving his expert advice on many important aspects of amoebiasis immunology. Across the Atlantic, the names which almost instantaneously come to my mind include Dr. Louis S. Diamond, Dr. Bruce P. Phillips and Dr. M.U. Lunde of the National Institute of Health (NIH), Bethesda, Maryland, U.S.A. for providing the laboratory and library facilities, and also for their fruitful discussions.
At the center for Disease Control (CDC), Atlanta, Georgia, U.S.A., Dr. Shirley E. Maddison, Dr. Irvin G. Kagan and Dr. George R. Healy were specially very kind to spare their valuable time for discussing amoebiasis immunology, besides, of course, the laboratory help. Dr. Z. Ali-Khan of the Department of Microbiology at the Royal Victoria Hospital of the University of McGill, Montreal, Canada was particularly very patient and generous in allowing me to use the departmental facilities. I am also grateful to two Aligarh University alumni Professor V iqar Zaman of the Faculty of Medicine, University of Singapore and Professor Wasim Ahmad Siddiqui of the Department of Tropical Medicine, University of Hawai, Honolulu for providing valuable suggestions, expensive
research gifts and rare reading materials. I would be failing in my duty without acknowledging the help by way of receiving a large number of reference and fluorescein-conjugated anti-immunoglobulin sera from Dr. Jaromila Jelinkova of the Institute of Hygiene and Epidemiology, W.H.O. International Reference Center for Streptococcus typing, Prague, Czechoslovakia and Dr. D.J. Rowe of the W.H.O. International Reference Center for Immunoglobulins, Lausanne, Switzerland.

The financial support from the World Health Organization for providing the Exchange of Scientific Worker's Grant to work and study at the various international amebiasis research centers is greatly acknowledged. Locally, the research fundings made available by the Indian Council of Medical Research (ICMR), Council of Scientific & Industrial Research (CSIR), the University Grants Commission (UGC) and the Individual Research Grants of the Aligarh Muslim University from time to time were immensely helpful for carrying out the incorporated investigations as part of the sponsored research under various projects. Lastly, I would also like to say thank you to Mr. Salim, the artist, Mr. Mohd. Majeer, the photographer, Mr. Abdul Waheed Khan, the typist, Mr. Zahir Ahmad and Mr. Munna Lal for providing their technical expertise and assistance.
