ACKNOWLEDGEMENTS

First of all I would like to thank God the Almighty and my Mother for making it possible for me to get this far in life on the path of education.

This work would not have been possible without the guidance and training provided by my Seniors of Research and Development Department of Moser Baer India Limited. They not only taught me how to conduct thorough research, they changed the way I thought and molded me into a well-rounded research engineer. I am forever indebted to them.

I have benefited tremendously from being a part of the R&D Center for the Study of Polymeric Systems throughout my research studies. The R&D dept personnel have provided help on numerous occasions regardless of their own obligations.

I express my sincere thanks to Mrs. Pritee Goyal, my research Guide for providing valuable guidance for carrying out this work.

The chief reason for any success I have had in life has been due to My Family for their encouragement and belief that I could achieve anything I set my mind on. I thank God everyday for giving me the chance to be their son. My wife, Sapna has been my most faithful and loving partner through most of my time of Research. Her support and sacrifices have been an illustration of what it means to be a true companion.

To all the staff of my department. I would like to give a special mention to Mr. Pinaki Ranjan Sir for their generosity of time and support.

I gratefully acknowledge my Research Coordinator Dr. Monalisha Boruah of JJT University, for her invaluable guidance and support during the course of this work. With her enthusiasm, ability to explain things clearly and simply, eye for detail and constant encouragement Dr. Monalisha helped make my thesis writing an enriching experience.
