List of Figures

1.1  Few examples of surfactants having various head groups; sodium dodecylsulfate (anionic), dimethyldodecylammonium bromide (cationic), hexaethylene glycol mono-n-dodecyl ether (nonionic) and dodecylsulfobetaine (zwitterionic) .......................................................... 2
1.2  Systematic representation of conventional surfactant and dimeric surfactant ......................... 4
1.3  Nonionic dimeric surfactant derived from sugar moiety .......................................................... 8
1.4  Typical structure of zwitterionic dimeric surfactant ................................................................. 8
1.5  Variation in the physical properties of surfactant solutions at different concentration ............. 12
1.6  Plot of surface tension versus surfactant concentration ......................................................... 12
1.7  MAMS = monoalkyldiphenylethermonosulfonate, MADS = monoalkyldiphehy letherdisulfonate; DAMS = dialkyldiphenylethermonosulfonate, and DADS = dialkyldiphenyletherdisulfonate ............................................................ 23
2.1  A schematic plot of the concentration dependence of the surface tension for mixed polymer-surfactant combinations ................................................................. 57
3.1  Experimental setup for the preparation of carboxylate anionic dimeric surfactants ................... 79
4.1  Few examples of anionic dimeric surfactants ........................................................................... 87
4.2  Synthesis pathway of carboxylate anionic dimeric surfactants (CADs, s = 12 & 16) by fatty amine, 1 and EDTA dianhydride, 2, (n = 11 & 15 for CAD_{12} & CAD_{16}, respectively) .......................................................... 89
4.3  Plot of the surface tension vs. surfactants concentration of anionic dimeric surfactant, CAD_{12}(●) and conventional monomeric surfactant, SDS(■) in the aqueous solution at 25 °C ........................................................................ 101
4.4  Plot of the surface tension vs. surfactants concentration of anionic dimeric surfactant, CAD_{16}(▲) and conventional monomeric surfactant, SDS(■) in the aqueous solution at 25 °C ........................................................................ 101
4.5  Specific conductivity (κ) vs. concentration plot for CAD_{12} at 25 °C ......................................... 104
4.6  Specific conductivity (κ) vs. concentration plot for CAD_{16} at 25 °C ......................................... 104
4.7  Emulsification power of the synthesized anionic dimers, CADs with reference D,S-1,4-PGTD ................................................................................................................................. 110
4.8  Affected regions of India by hard water ..................................................................................... 112
4.9  Foam stability of the synthesized anionic dimers, CAD_{12}(B) and CAD_{16}(C) with sodium stearate (A) ......................................................................................................................... 115
4.10 Calcium tolerance of CADs with reference surfactants ............................................................. 117
4.11 Thermo gravimetric analysis (TGA) of carboxylate anionic dimeric, CAD_{12} 120
4.12 Thermo gravimetric analysis (TGA) of carboxylate anionic dimeric, CAD_{16} 120
5.1 Schematic illustration of the binding of organic counter-ion (hydrotrope) at the micellar interface of dimeric surfactants 124
5.2 Molecular structure of CADs 126
5.3 Molecular structure of organic salts tested as additives with CADs 126
5.4 Critical micelle concentration (CMC) of anionic dimeric surfactant, CAD_{12} in the presence of inorganic and organic salts at 25 °C 130
5.5 Critical micelle concentration (CMC) of anionic dimeric surfactant, CAD_{16} in the presence of inorganic and organic salts at 25 °C 130
6.1 Structural formula of PVP 139
6.2 Specific conductivity (κ) vs. concentration plot for CAD_{12} (▼) and CAD_{16} (▲) at 25 °C 141
6.3 Specific conductivity (κ) vs. concentration plot for SDS (♦) at 25 °C 141
6.4 Plots of specific conductivity (κ) vs. CAD_{12} in the presence of different concentration of PVP at 25 °C 142
6.5 Plots of specific conductivity (κ) vs. CAD_{16} in the presence of different concentration of PVP at 25 °C 142
6.6 Plots of specific conductivity (κ) vs. SDS in the presence of different concentration of PVP at 25 °C 143
6.7 Variation of surface tension (γ) with pure CAD_{12} and in the presence of various concentration of PVP at 25 °C 155
6.8 Variation of surface tension (γ) with pure CAD_{16} and in the presence of various concentration of PVP at 25 °C 155
6.9 Variation of surface tension (γ) with pure SDS and in the presence of various concentration of PVP at 25 °C 156
6.10 Schematic illustration of the conformations PVP/CADs complexes; polymer molecule (1), polymer surfactant association (2), Bound-surfactant molecules after CAC (3), and complex formation after CMC (4) in aqueous medium 158
7.1 Chemical structures of conventional surfactants 164
7.2 Critical micelle concentrations (Cm, Ci) vs. mole fractions (α) of binary mixtures: (a) CAD_{12}/CS, (b) CAD_{16}/CS 175
7.3 Variation in β_{avg} values for the combination of CAD_{12}/CS (a) and CAD_{16}/CS (b) in aqueous solutions 176
7.4 Chemical structures of PAHs 179
7.5 Plots of the surface tension (γ) vs. concentration at 25°C; (a) CAD\textsubscript{12} and CAD\textsubscript{16} individual, and (b) binary anionic dimeric mixture CAD\textsubscript{12-16}

7.6 Variation of the solubility of PAHs with surfactant concentration CAD\textsubscript{12} (a) and CAD\textsubscript{16} (b)

7.7 Variation of the solubility of pyrene with surfactant concentration CAD\textsubscript{12} (■) and CAD\textsubscript{16} (▲)

7.8 Solubilization of PAHs in CAD\textsubscript{12-16} mixed surfactants

7.9 Solubility of pyrene with CAD\textsubscript{12-16} mixed surfactants

A-4.1 FT-IR spectrum of carboxylate anionic dimeric, CAD\textsubscript{12}

A-4.2 Interpretation of the structure of CAD\textsubscript{12}

A-4.3 \textsuperscript{1}H-NMR spectrum (300 MHz) of carboxylate anionic dimeric, CAD\textsubscript{12}

A-4.4 \textsuperscript{13}C-NMR spectrum (300 MHz) of carboxylate anionic dimeric, CAD\textsubscript{12}

A-4.5 FT-IR spectrum of carboxylate anionic dimeric, CAD\textsubscript{16}

A-4.6 Interpretation of the structure of CAD\textsubscript{16}

A-4.7 \textsuperscript{1}H-NMR spectrum (300 MHz) of carboxylate anionic dimeric, CAD\textsubscript{16}

A-4.8 \textsuperscript{13}C-NMR spectrum (300 MHz) of carboxylate anionic dimeric, CAD\textsubscript{16}

A-5.1 Plots of surface tension vs. surfactant concentration of anionic dimeric surfactant, CAD\textsubscript{12} in 10\textsuperscript{-3} M inorganic and organic salts at 25°C

A-5.2 Plots of surface tension vs. surfactant concentration of anionic dimeric surfactant, CAD\textsubscript{12} in 10\textsuperscript{-2} M inorganic and organic salts at 25°C

A-5.3 Plots of surface tension vs. surfactant concentration of anionic dimeric surfactant, CAD\textsubscript{12} in 5 × 10\textsuperscript{-2} M inorganic and organic salts at 25°C

A-5.4 Plots of surface tension vs. surfactant concentration of anionic dimeric surfactant, CAD\textsubscript{12} in 10\textsuperscript{-1} M inorganic and organic salts at 25°C

A-5.5 Plots of surface tension vs. surfactant concentration of anionic dimeric surfactant, CAD\textsubscript{16} in 10\textsuperscript{-3} M inorganic and organic salts at 25°C

A-5.6 Plots of surface tension vs. surfactant concentration of anionic dimeric surfactant, CAD\textsubscript{16} in 10\textsuperscript{-2} M inorganic and organic salts at 25°C

A-5.7 Plots of surface tension vs. surfactant concentration of anionic dimeric surfactant, CAD\textsubscript{16} in 5 × 10\textsuperscript{-2} M inorganic and organic salts at 25°C

A-5.8 Plots of surface tension vs. surfactant concentration of anionic dimeric surfactant, CAD\textsubscript{16} in 10\textsuperscript{-1} M inorganic and organic salts at 25°C
