ACKNOWLEDGEMENT

I am thankful to the authorities of various small Schools and their students who acted as subjects in the present investigation with extreme interest and co-operation.

I express my unlimited sense of gratitude to Professor P.E. Vernon, the former tutor of my supervisor, for going through the plan of the present research and for scrutinizing the factorial analysis of the ability tests and for naming the factors that were obtained after the rotation of the battery. It was his kindness and generosity that he allowed me through my supervisor to use his tests, namely GRADED ARITHMETIC - MATHEMATICS TEST, NON-VERBAL 'g', PATTERN REPRODUCTION, and DRAWING PATTERN, in the present investigation.

I express my thanks to Messrs University of London Press Ltd. for giving the permission to my supervisor as Editor, Indian Psychological Bulletin to print limited copies of Professor Vernon's Graded Arithmetic-Mathematics test for use in the present investigation.

I also express my deep sense of gratitude to Dr. K. Lovell who allowed me through my supervisor to use three of his tests, namely hidden Gottschaldt shapes, Trist-Hargreaves' Concept-formation test, Lovell's Concept-formation test, and allied materials for the present investigation.
I am indebted to Professor J.C. Raven who gave twenty-five copies of Progressive Matrices to my supervisor. Without this help Matrices could not have been included in this investigation.

I acknowledge my thanks to Mr. M.A. Khan Affridi for typing the thesis.

I record here my sincerest thanks to Dr. Aquiel Ahmed, the first successful Ph.D. student of my supervisor, and to Mrs. Joycee Ahmed who went through the manuscript of the thesis and suggested various corrections and changes. My thanks are as well due to my other fellow researchers and friends, namely Mr. Qasim Hussain and Mr. A.K. Ganguly for their rendering various sorts of help in the present investigation. Also, I feel gratefulness to Mr. A.N. Ganguly and Mr. K.P. Singh and other friends.

I am thankful to Mr. Badr-ud-Din Tayabji, Professor, H.L. Sharma Professor M. Umaruddin, and Captain Hameedul Hasan for their help regarding the technicalities I had to pass through during my study at the Aligarh Muslim University.

I am indebted to my old mother and late uncle who helped me financially as far as could be possible for them.

As it always happens whenever the supervisor is not the Head of the Department it is really difficult to conduct doctoral researches in the psychological laboratories of the Indian Universities. In my case also, I along with other
three fellow researchers had to do the work not in the psychological laboratory but either in the library of the Indian Psychological Bulletin or in the personal library of my supervisor and of course it is needless to say that by doing so we encroached upon the domestic comforts of our supervisor's wife Mrs. Anima Ray-Chowdhury who tolerated us with all her patience and in return blessed us with her motherly affection and inspiration, by virtue of which alone we could stand this long perilous path to success. At last I express my whole-hearted indebtedness to my supervisor, Dr. K. Ray-Chowdhury, Reader in Psychology Muslim University and Editor Indian Psychological Bulletin. He has imbibed in him the intellectual traditions of Calcutta which saw the establishment of the first psychological laboratory in India in 1916 by Dr. N.N. San Gupta (trained in Harvard) and eminent professors like Late Dr. G.S. Bose (known as Indian Freud) Late Dr. S.C. Mitra (trained in the laboratory of Professor Wundt) and Professor S.K. Bose (trained in the Michigan University under Professor Hadley Cantrill, and of London which saw the origin of the hierarchical structure of human abilities as early as 1904 in the writings of Professor C. Spearman and vicissitude to retain the title of hierarchy in the writings of the modern factorist Professor P.E. Vernon (1950). Had my supervisor not been a man of international relations in the field of psychology, it would
have been impossible for me to get the test and other necessary co-operation from various psychologists and publishers from abroad. I am ever indebted to him for his affection and unshakable faith in me to the extent that he entrusted me with an important and intricate problem like that in the present investigation. I was so much inspired with his intellectual height and masterly grasp of the subject, rigid with Vernonian Psychology from all aspects, that I forgot all my limitations to study this problem. I am indebted to him for the planning of the present investigation. Those who are acquainted with his subtle touches in psychology and statistical techniques will at once recognise the amount of help I have incurred from him in the present investigation.

Aligarh Muslim University, Aligarh: Shankar Lal Misra
