</tbody>
</table>
12. Ethnic groups to which the pregnant, lactating and non-pregnant, non-lactating respondents from different income groups belonged.

13. Consumption of special foods during pregnancy and lactation in different income groups.

15. Consumption of methipak during pregnancy, lactation and winter in different income groups.

16. Claimed beneficial effects of consuming methipak during pregnancy and lactation in different income groups.

17. Number of respondents who considered that methipak could be consumed during pregnancy or lactation in different income groups.

18. Reasons for not consuming methipak during pregnancy by subjects in different income groups.

19. Sharing of methipak by other members of the family in different income groups.

20. Ingredients used in the preparation of methipak and their functions.

21. Herbs and spices used in the preparation of methipak and their functions.

CHAPTER 3 Animal experiments

22. Composition of the control and experimental diets.

23. Composition of fenugreek and plain biscuits for the experiment.

24. Composition of the mineral mix

25. Composition of the water soluble vitamin mix

26. Composition of the fat soluble vitamin mix

27. Food intake and fenugreek intake by the pregnant dams in fenugreek fed and control groups.
28. Body weights of pregnant dams in fenugreek fed and control groups on day 1, 7, 14 and 21 of pregnancy.

29. Body weight changes of the pregnant dams in fenugreek fed and control groups on day 7, 14 and 21 of pregnancy.

30. Reproductive performance of pregnant dams in fenugreek fed and control groups.

31. Food consumption by dams during pregnancy and lactation in fenugreek fed and control groups.

32. Body weights of dams on day 1, 7, 14, 21 of pregnancy and at parturition.

33. Body weight changes in dams during pregnancy and parturition in fenugreek fed and control groups.

34. Litter size, birth weight and growth of pups in fenugreek fed and control groups.

CHAPTER 4 Product Development

35. Composition of the biscuits with different variations of ingredients.

36. Acceptance by the laboratory panel, of biscuits with whole wheat flour (A) versus refined wheat flour (B).

37. Acceptance by the laboratory panel of biscuits with soya flour versus bengal gram flour.

38. Acceptance by the laboratory panel of biscuits with lecithin versus biscuits without lecithin.

39. Acceptance by the laboratory panel of biscuits with sugar versus biscuits with jaggery.

40. Possible combinations of amounts of different ingredients of the biscuits.

41. Sensory evaluation scores to determine the optimum amounts of ingredients in the biscuits.

42. Ranking by the laboratory panel of six samples.
of biscuits to determine the optimum amounts of ingredients (Kramer's Rank Sum Test).

43. Acceptability of methi biscuits at three levels of methi seed powder by the laboratory panel.

44. Results of F test and LSD for acceptability of methi biscuits.

45. Number of children asking for more than 2 biscuits at different levels of fenugreek seed powder.

46. Number of biscuits consumed by children at different levels of fenugreek seed powder.

47. Atmospheric temperature and relative humidity from June to November (1985) in Baroda City.

48. Results of shelf life testing of sweet and methi biscuits under ambient temperature and relative humidity.

49. Results of accelerated shelf life testing of sweet and methi biscuits.

50. Mean scores of sensory evaluation scores for shelf life testing of sweet and methi biscuits.

51. Nutrient composition of sweet and methi biscuits.

CHAPTER 5 Product testing

52. Background information on the pregnant and lactating subjects enrolled for the study.

53. Acceptability of methi biscuits among pregnant and lactating subjects.

54. Acceptability of methi biscuits by pregnant versus lactating subjects.

55. Acceptability of methi biscuits by pregnant subjects in different trimesters.

56. Acceptability of methi biscuits by lactating subjects at different months of lactation.

57. Acceptability of methi biscuits by pregnant and lactating subjects in relation to parity.
58. Acceptability of methi biscuits by pregnant and lactating subjects belonging to different ethnic groups.

59. Acceptability of methi biscuits among pregnant and lactating subjects belonging to joint and nuclear families.

60. Acceptability of methi biscuits by literate versus illiterate pregnant and lactating subjects.

61. Acceptability of methi biscuits by pregnant and lactating subjects in relation to the per capita income.

62. Acceptability of methi biscuits among preschool children beneficiaries of the ICDS.

63. Regularity of collection of sweet versus methi biscuits by the study subjects.

64. Regularity of collection of sweet and methi biscuits by pregnant vs lactating subjects.

65. Regularity of collection of sweet and methi biscuits by pregnant subject in different trimesters.

66. Regularity of collection of sweet and methi biscuits by lactating subjects at different months of lactation.

67. Regularity of collection of sweet and methi biscuits by pregnant and lactating subjects in relation to parity.

68. Regularity of collection of sweet and methi biscuits by pregnant and lactating subjects belonging to different ethnic groups.

69. Regularity of collection of sweet and methi biscuits by pregnant and lactating subjects belonging to joint and nuclear families.

70. Regularity of collection of sweet and methi biscuits by literate vs illiterate pregnant and lactating subjects.
71. Regularity of collection of sweet and methi biscuits by pregnant and lactating subjects in relation to per capita income.

72. Sharing of sweet and methi biscuits by the subjects.

73. Sharing of sweet and methi biscuits by pregnant and lactating subjects.

74. Sharing of sweet and methi biscuits by pregnant subjects in different trimesters.

75. Sharing of sweet and methi biscuits by lactating subjects at different months of lactation.

76. Sharing of sweet and methi biscuits by pregnant and lactating subjects in relation to parity.

77. Sharing of sweet and methi biscuits by pregnant and lactating subjects belonging to different ethnic groups.

78. Sharing of sweet and methi biscuits by pregnant and lactating women belonging to joint vs nuclear families.

79. Sharing of sweet and methi biscuits by literate vs illiterate pregnant and lactating subjects.

80. Sharing of sweet and methi biscuits by pregnant and lactating subjects in relation to per capita income.

81. Sharing of sweet and methi biscuits in the first half of the experiment.

82. Sharing of sweet and methi biscuits in the second half of the experiment.

83. Sharing of methi biscuits in the I half of the experiment vs sharing of methi biscuits in the II half of the experiment.

84. Sharing of sweet biscuits in the I half of the experiment vs sharing of sweet biscuits in the II half of the experiment.
85. Family members with whom sweet and methi biscuits were shared.
86. Sharing of sweet and methi biscuits in families, with preschoolers vs families with schoolers.
87. Claimed amount of sweet and methi biscuits consumed by the pregnant and lactating subjects.
88. Claimed consumption of sweet and methi biscuits by pregnant vs lactating subjects.
89. Claimed consumption of sweet and methi biscuits by pregnant subjects in different trimesters.
90. Claimed consumption of sweet and methi biscuits by lactating subjects at different months of lactation.
91. Claimed consumption of sweet and methi biscuits by pregnant and lactating subjects in relation to parity.
92. Claimed consumption of sweet and methi biscuits by pregnant and lactating subjects belonging to different ethnic groups.
93. Claimed consumption of sweet and methi biscuits by pregnant and lactating subjects belonging to joint and nuclear families.
94. Claimed consumption of sweet and methi biscuits by literate vs illiterate pregnant and lactating subjects.
95. Claimed consumption of sweet and methi biscuits by pregnant and lactating subjects in relation to per capita income.
96. Calculated calories and protein intakes of pregnant and lactating subjects with and without supplementation with biscuits.
97. Time at which the biscuits were generally consumed by the subjects.
98. The way in which the biscuits were consumed (with tea / without tea etc) by the subjects.
99. Perceived beneficial effects of sweet and methi biscuits on self by pregnant and lactating subjects.

100. Perceived beneficial effects of sweet and methi biscuits on the infants.

101. Weight changes in pregnancy after supplementation with sweet and methi biscuits.

102. Efficiency of distribution of biscuits by the Anganwadi Workers.

CHAPTER 6 Summary and Conclusions

103. Summary of acceptability, regularity of collection, sharing and consumption of sweet and methi biscuits by pregnant vs lactating subjects.

104. Summary of acceptability, regularity of collection sharing and consumption of sweet and methi biscuits in relation to some background variables.
