APPENDICES
APPENDIX- I

Mean of actual number of children born by married weavers

The mean of actual number of children born by married weavers was calculated by

\[
\frac{\text{Total number of children}}{\text{Total number of married weaver}} = \text{Mean of actual number of children}
\]

\[\frac{406}{124} = 3.2\]

APPENDIX- II

Mean of actual numbers of children in the family of the unmarried weavers

The mean of actual number of children in the natal family of the unmarried weavers was calculated by

\[
\frac{\text{Total number of children in the family}}{\text{Total number of unmarried weavers' mother}} = \text{Mean of actual number of children in natal family}
\]

\[\frac{637}{154} = 4.1\]
