CONTENTS OF TABLES

1.1 Tables for calculating the covariance matrix for n=5 to 10 equally spaced values of x for r= 0.20(0.01)0.79.

2.1 Percentage efficiencies of the ratio of linear estimator of S.

2.2 Biases in the ratio of linear estimates i.e. equations (2.6) and (2.8).

2.3 Multipliers $\psi^2/(S^2(I-S))$ in the asymptotic variance of various estimators for increasing variance model.

3.1 Efficiencies of two Quadratic Estimators.

3.2 Comparison of Biases in two Quadratic estimators.

3.3 Values of k/\(\mathcal{L}\) for zero bias for two cases.

3.4 Bias in Patterson's Quadratic estimators.

3.5 Bias in Khatri and Shah's modified Quadratic estimators.

4.1 Values of \(U_x\) and \(V_x\) for n=6 to 14.

4.2 Percentage efficiencies of the estimates of \(S\) obtained from equation (4.3) using \(U_x\) and \(V_x\) of Table 4.1.

5.1 Values of \(U_x\), \(V_x\) and \(Z_x\) for n=7 to 14.

5.2 Percentage efficiencies of the estimators of \(S\) obtained from equation (5.3) using \(U_x\), \(V_x\) and \(Z_x\) of Table 5.1 for n=14 for all values of \(S\).

5.3 Percentage efficiencies of the estimates of \(S\) obtained from equation (5.3) using \(U_x\), \(V_x\) and \(Z_x\) for \(S=0\) and \(I\) and for n=7 to 14.
