Chapter 2

Schematic representation of the construction of N terminal of *xisA* gene | 51 |

Chapter 3

| Figure 1 | Mechanisms of sensing N status in *E. coli* | 65 |

Chapter 4

| Figure 1 | Restriction digestion pattern of pMX25 (a) and pMX32 (b) plasmids by EcoR1 | 78 |
| Figure 2a | Restriction digestion pattern of *E. coli* JM101 containing pMX25 and pAM1323 plasmids by EcoR1 | 78 |
| Figure 2b | Restriction digestion pattern of *E. coli* JM101 containing pMX25 and pAM1323 plasmids | 79 |
| Figure 2c | Restriction digestion pattern of *E. coli* JM101 containing pMX32 and pAM1323 plasmids | 79 |
| Figure 3 | Excision of *nifD* element of *Anabaena* PCC 7120 in *E. coli* JM101 containing pMX25 and pAM1323 plasmids | 80 |
| Figure 4 | Restriction digestion pattern of pKK1 and pAM1323 plasmids by EcoR1 | 80 |
| Figure 5 | β-galactosidase activity of *PxisA-lacZ* reporter fusion in *E. coli* JM101 containing *ntcA* gene in the stationary phase of Luria broth and M9 minimal medium | 81 |
Figure 6 Isolation of genomic DNA of Anabaena sp. strain PCC 7120
Figure 7 Amplification of ntcA gene of Anabaena sp. Strain PCC 7120
Figure 8 Map of plasmid (A) pACYC184 and (B) pTZ57R.

Chapter 5

Figure A Protein domain structure of λ integrase
Figure 1 Amplification of the N terminal domain of the xisA gene
Figure 2 Restriction digestion of T vector containing N terminal of xisA gene
Figure 3 Restriction digestion of the pNTMCGm plasmid
Figure 4 Restriction digestion of E. coli DH5α transformants
Figure 5 Amino acid sequence encoded by N terminal of xisA gene in pTZ57R and pNTMCGm plasmid
Figure 6 Expression of N-terminus Protein in E. coli DH5α in LB

Chapter 6

Figure 1 Amplification of xisA without promoter
Figure 2 Colony PCR of xisA without promoter
Figure 3 Digestion of pMalp2 and pMalp2-Xis with HindIII and ScaI
Figure 4 Protein profile of total cell extract of E. coli pMALp2-Xis grown in Luria Broth at 37°C
Figure 5 Protein profile of periplasmic extract of E. coli pMALp2-Xis and pMalp2 grown in Luria Broth at 37°C
Figure 6 Protein profile of total cell extract of E. coli pMALp2-Xis and pMalp2 grown in 100 ml Luria Broth at 25°C
Figure 7 Protein profile of periplasmic extract of E. coli pMALp2-Xis and pMalp2 grown in 100 ml Luria Broth at 25°C
Figure 8 Protein profile of TCA precipitated periplasmic extract of E. coli pMALp2-Xis and pMalp2 grown in 100 ml Luria Broth at 25°C
Figure 9 Protein profile of TCA precipitated Total cell extract of E. coli pMALp2-Xis and pMalp2 grown in 100 ml Luria Broth at 25°C

Chapter 7
Figure 1 Cloning of xisA in (a) pET20b(+) and (b) pVN6 109
Figure 2 Amplification of the xisA gene 110
Figure 3 HindIII digestion of plasmids containing xisA gene 111
Figure 4 BamHI Digestion of pVN6xisA plasmid 111
Figure 5 HindIII digestion of pVN6xisA 111
Figure 6 HindIII digestion of pET20b(+) and pETxisA plasmids 112
Figure 7 SDS PAGE profile of expression of xisA gene using regulatory circuit 113
Figure 8 Induction of the xisA gene expression in dicistronic form with C protein of the Mu phage under regulatory circuits in E. coli BL26 pNC1 pVN6xisA 113
Figure 9 Induction of the xisA gene expression in dicistronic form with C protein of the Mu phage under regulatory circuits in E. coli BL26 pNC1 pVN6xisA 114
Figure 10 xisA gene expression form BL26 pNC1 & pVN6xisA 115
Figure 11 Activity assay of XisA protein on substrate plasmid pBR322NG1 using low salt buffer of the NEB 115
Figure 12 Phosphocellulose column purification fractions of BL26 pNC1 pVN6xisA. 116
Figure 13 XisA expression using different combination of plasmid in BL21 (DE3) using plasmid pLysE or without pLysE 117
Figure 14 Expression of XisA using BL21 harboring pLysE pVN6xisA after 5 h of induction with 0.5 mM final concentration of IPTG 118
Figure 15 Protein expression profile of the sonicated supernatant and pellet sample of BL21 pLysE pETxisA 118
Figure 16 PEI precipitation in presence of different NaCl concentration BL21 pLysE pETxisA 119
Figure 17 Different ammonium sulphate precipitation of PEI cut samples of BL21 pLysE and pETxisA 120
Figure 18 Protein purification using affinity column chromatography where phosphocellulose as column material 121
Figure 19 Heparin column purified early fractions 121
Figure 20 Mono Q fractions loaded on the 7% SDS-PAGE 122
