##CONTENTS

Abstract  (i)  
Acknowledgments  (x)  
Contents  (vii)  
List of Tables  (ix)  
List of Figures  (x)  
Glossary  (xiii)  

###Chapter 1  Introduction

1.1 General Background  1  
1.2 Historical Development of High Frequency transformer  4  
1.2.1 Low power & Ultra-high frequency applications  6  
1.2.2 High power & mid-frequency Transformer applications  7  
1.2.3 Mid-power & High-frequency Transformer applications  8  
1.3. Switch Mode Soft Switching Converter  8  
1.3.1 Resonant Converter  10  
1.3.2 Load Resonant Converter  10  
1.3.3 Resonant Switch Converter  13  
1.3.4 Multi Resonant Switch Converter  14  
1.4 Objectives of present work and Author’s contribution  15  
1.5 Organization of Thesis  16  

###Chapter 2  Modeling and Simulation of Pulse-Width Modulated Resonant DC/DC Converter

2.1 Introduction  17  
2.2 Circuit Description  17  
2.3 Principle Operation  18  
2.4 Steady State Analysis  19  
2.4.1 Assumptions  19  
2.4.2 Output Stage  20  
2.4.3 Resonant Tank Circuit  22  
2.4.4 Switch Compensating Network  24  
2.4.5 Modified Series Resonant Converter  25  
2.5 Simulation Result  28  
2.6 Conclusion  33  

###Chapter 3  Modeling & Analysis of Core losses in High Frequency Transformer

3.1 Background  34  
3.2 Challenges  35  
3.3 Material Characterization  36  
3.4 Characteristics of Conventional Ferri and Ferro Materials Ferrites  38
3.5 Amorphous Metals
3.6 Supermalloy
3.7 Loss Calculation and Verification
3.7.1 Calculation Method Survey
3.7.2 Proposed Loss Calculation Method
3.8 Conclusion

Chapter 4 Design and Development of High Frequency Transformer
4.1 Characteristic of Nenocrystalline Material
4.2.1 Loss Performance
4.2.2 B/H Curve
4.2.3 Temperature dependence Performance
4.2.4 Cut core issue
4.3 Winding loss Calculation
4.4 Litz wire optimal design
4.5 Step-up transformer design
4.6.1 Winding Capacitance Calculation
4.6.2 Simplified Energy Based Calculation Method
4.6.3 Transformer Winding Capacitance Calculation
4.7 Leakage Inductance Calculation
4.8.1 Leakage Inductance Calculation Method Survey
4.8.2 Proposed Inductance Calculation Method
4.8.3 Verification
4.9 Minimum Size design Procedure
4.10 Prototyping and Testing Result
4.11 Conclusion

Chapter 5 Development of Driver Card and Wavelet Analysis of input Signals
5.1 General Background
5.2 Development of driver card
5.3 Why wavelet
5.4 Separability Property
5.5 Signal Decomposition
5.6 Conclusion

Chapter 6 Experimental Test Setup and Results
6.1 Introduction
6.2 Testing of Full Bridge Ckt.
6.3 Short Ckt. Test
6.4 Conclusion
6.5 Conclusions and Scope for Future Work
