ACKNOWLEDGEMENTS

The author is extremely indebted to Major A.N. Mukherjee and Dr. P.N. Odedra, Superintendents of Mental Hospital, Baroda and Ahmedabad respectively who were psychiatrists in charge of the patients undertaken for this study. They took pains to select thought disordered schizophrenic patients as per criteria laid down by Mayer Gross, Slatter and Roth. They also helped the author in many more ways by facilitating this study in the hospital. The medical and nursing staff and the hospital attendants have helped in smoothly carrying out this study. I am also no less indebted to all of them.

My thanks are also due to Shri C.R. Patel, Principal, Government Basic Teachers' Training College for men who facilitated the work of data collection in his college. The other staff members in the college also helped in this work and I acknowledge my thanks to them.

The schizophrenic patients and the trainees in the college who willingly gave their time for exacting experimental testing without which the work could not have been completed. I sincerely express my thanks to all of them for their co-operation.
The statistical work involved in this work was quite big and time devouring. This work could not have been completed without the help of my friend, Shri N. S. Pathak, Lecturer in Faculty of Education and Psychology. I am indebted to him for the same.

The author is extremely indebted to his guiding teacher, Dr. A. S. Patel, in the Department of Psychology, Faculty of Education and Psychology, The Maharaja Sayajirao University of Baroda, Baroda. He has taken keen interest throughout the work and tendered his extremely valuable guidance at every phase of this dissertation.

Lastly, let me express my thanks to all those who have in any way helped in carrying out this piece of work.

BARODA, JANUARY 15, 1964. V. B. SHAH
