APPENDICES
To convert viscometer dial reading to eentipose, multiply reading noted on viscometer 0-100 scale by factor shown besides speed at which measurements being made.

Viscosity in eentipose = Dial reading x Factor

Example: Dial reading = 75, Factor = 200
(Factor at spindle no.5 and r.p.m.20)

75 x 200 = 15,000 Cps.
